

Subject card

Subject name and code	Sewerage systems, PG_00043651							
Field of study	Environmental Engineering							
Date of commencement of studies	October 2021		Academic year of realisation of subject		2023/2024			
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study			
Mode of study	Full-time studies		Mode of delivery		at the university			
Year of study	3		Language of instruction		Polish			
Semester of study	6		ECTS credits		5.0			
Learning profile	general academic profile		Assessment form		exam			
Conducting unit	Department of Sanitary Engineering -> Faculty of Civil and Environmental Engineering							
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Ewa Wojciechowska					
	Teachers		prof. dr hab. inż. Ewa Wojciechowska dr inż. Karolina Matej-Łukowicz					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar		
	Number of study hours	30.0	0.0	0.0	30.0	0.0		
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		SUM		
	Number of study hours	60		8.0		60.0		
					128			
Subject objectives	The aim of this subject is to get the student acquainted with the basic knowledge concerning construction, design and operation of sewerage systems as well as sewer materials and exploitation equipment. The student should gain abilities to design and calculate sewerage systems, select necessary equipment, proper use of terminology, literature, data bases, producers' catalogues as well as understand the social and ecological aspects of sewerage systems construction, operation and maintenance.							

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U12] can design installations, networks and facilities: water supply, sewage, heating and gas	During realization of project in two-person teams the student plans and makes subsequent design stages and calculations according to the time-schedule.	
	[K6_U13] knows the rules of application and can choose the materials of the sanitary industry	Student knows the applications of materials in sanitary sector and understands the principles of material selection in sanitary and storm sewers.	
	[K6_W07] has a structured and theoretically founded knowledge in the field of materials used in the sanitary industry, their physico-chemical properties; knows and understands the basic processes of their production	Student knows the latest and the traditional technologies applied in sewerage systems.	
	[K6_W09] has ordered, theoretically founded knowledge in the field of water supply, sewage, heating, ventilation and air conditioning, and the principles of shaping the microclimate of rooms; knows legal regulations, standardization issues and recommendations for the design of water supply, sewage, heating and gas networks and installations	Student has systematic knowledge on the sewerage systems, the calculations and design principles.	
	[K6_U03] can prepare documentation regarding the implementation of an engineering task/project and prepare a text or presentation including a discussion of the results of the implementation	Student can prepare conceptual project of different size sewerage system.	
Subject contents	<p>Lectures: Classification of sewerage systems depending on combined and separate transport of wastewater and stormwater. Gravitational sewers, pressure and vacuum sewers. Quantitative estimations of sanitary wastewater, industrial wastewater and stormwater. Types and shapes of sewer cross-sections. Material and construction of sewers - traditional and new. The sewers foundation in the ground. Hydraulic calculations of gravitational sewers. Sewerage equipment: manholes, stormwater overflows, siphones, separators. Pumping and lift stations. Operation and exploitation of sewer systems. Trenchless technologies of construction and renovation of sewers. Sustainable stormwater management.</p> <p>DESIGN: Design of gravitational separate sewer system for a medium-size city. Sewer routing, location of wastewater treatment plant, location of calculation nodes. Division into sub-catchments due to spatial management and terrain configuration. Calculation of wastewater and stormwater flow rates. Sewer profiles and hydraulic calculation of sewers. Design of pumping station and pump selection. Technical description.</p>		
Prerequisites and co-requisites	Does not apply		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	exam	50.0%	50.0%
