

Subject card

Subject name and code	Water and Waste-water Technology I, PG_00042735						
Field of study	Environmental Engineering						
Date of commencement of studies	October 2021	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Part-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			5.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Environmental Engineering Technology -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Rafał Bray				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	16.0	0.0	16.0	0.0	0.0	32
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	32		5.0		88.0	125
Subject objectives	Student will acquire the necessary knowledge on issues related to the implementation of unit processes used in water treatment plants.						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[K6_U09] is able to use well-chosen methods and measuring devices that enable determination of basic parameters of the water treatment process and wastewater treatment; can perform simple laboratory tests leading to the assessment of water quality, pollutant load in sewage		The student is able to use properly selected methods and measuring devices to determine the basic parameters of the water treatment process; can perform simple laboratory tests leading to water quality assessment.				
	[K6_W03] has a structured and theoretically founded knowledge in the field of chemistry and biology, including knowledge necessary to understand the technological processes related to water treatment, wastewater treatment, waste management and sludge management		The student has structured and theoretically founded knowledge in the field of chemistry and biology, including the knowledge necessary to understand the technological processes related to water treatment.				
	[K6_U01] has the ability to self-education, can obtain information from literature, databases and other sources, uses information technology, Internet resources; can integrate the obtained information, make their interpretation, as well as draw conclusions and formulate and justify opinions		The student has the ability to self-study, is able to obtain information from literature, databases and other sources, uses information technologies, Internet resources; is able to integrate the obtained information, interpret it, as well as draw conclusions and formulate and justify opinions.				

Subject contents	Lectures: Water in nature and its physical and chemical characteristics. The quality of groundwater and surface water. The requirements concerning the quality of drinking water and industrial water. The removal of admixtures and contaminants forming heterogeneous bodies. Water clarification and sedimentation. The coagulation of water contaminants. Coagulants, flocculants and substances supporting the coagulation. The factor limiting coagulations. Volumetric coagulation. Surface coagulation. Contact coagulation in suspended precipitate. Water filtration. Pressure and gravity filter. Organic microcontaminants removal in sorption processes. Water disinfection. Physical methods of disinfection. Chemical oxidizing substances in water disinfection: chlorine, dioxide chlorine, ozone. The removal of admixtures and contaminants forming homogeneous bodies. Iron compounds removal. Manganese compounds removal. The equipment applied to the iron and manganese removal from water. Ion exchange processes, the types of ion exchange. Removing of carbonate hardness and demineralization of water in ion exchanging processes. Water degasification. Water stabilization. Laboratories: The introduction to the laboratory classes. Physical-chemical determination of selected contaminants of natural waters. Thermal and chemical degasification. Ion exchange. Coagulation. Removal of iron in water. The revision. Test		
Prerequisites and co-requisites	Good knowledge of subject Environmental protection (SSPK15), Chemistry (SSPK7) and Environmental biology and ecology (SSPK18)		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written exam	60.0%	35.0%
	Oral exam	60.0%	35.0%
	Practical exercise	60.0%	30.0%
