

Subject card

Subject name and code	District Heating, PG_00048007						
Field of study	Environmental Engineering						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Part-time studies		Mode of delivery		at the university		
Year of study	4		Language of instruction		Polish		
Semester of study	7		ECTS credits		8.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Sanitary Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Ewa Zaborowska				
	Teachers		mgr inż. Agata Kubryńska-Korczak				
			dr hab. inż. Ewa Zaborowska				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	25.0	15.0	0.0	15.0	0.0	55
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	55		10.0		135.0	200
Subject objectives	The aim of the subject is to acquaint students with detailed knowledge in the range of heating substations,current regulations and standards related to the subject, materials types and selection criteria, methods andtools supporting designing process, methods and technologies of installation, including other than technicalconditions. The subject objective is to acquire skills in the range of utilising and converting different sourcesof information, application of calculation methodology and the principles of designing.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U12] can design installations, networks and facilities: water supply, sewage, heating and gas	Knows how to design a heating substation	[SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment
	[K6_W09] has ordered, theoretically founded knowledge in the field of water supply, sewage, heating, ventilation and air conditioning, and the principles of shaping the microclimate of rooms; knows legal regulations, standardization issues and recommendations for the design of water supply, sewage, heating and gas networks and installations	Has an ordered and theoretically founded knowledge in the field of heating, knows design recommendations	[SW1] Assessment of factual knowledge
	[K6_U11] can use selected computer programs to support design, including CAD graphics programs	Can use selected computer programs supporting design (e.g., heat exchangers selection)	[SU4] Assessment of ability to use methods and tools
	[K6_U13] knows the rules of application and can choose the materials of the sanitary industry	Knows the rules of use and can select materials for the installations	[SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information
	[K6_U03] can prepare documentation regarding the implementation of an engineering task/project and prepare a text or presentation including a discussion of the results of the implementation	Can prepare documentation on a realization of a project and a presentation	[SU1] Assessment of task fulfilment
Subject contents	<p>LECTURES: Heating substations classification. Direct and indirect heating substations. Hydraulic schematic diagrams. Heat exchange and heat exchangers. Functional modules of heating substations. Fittings, devices and piping. Automatic control system. Safety device. Filling and refilling water system. Heating substation rooms. Water and wastewater installations in heating substation room. Regulations, standards, technical requirements. Technical requirements and tests. Heating energy tariffs and costs. TUTORIALS/PROJECT: Calculations in the range of heating substations. Project of heating substation, joined to high-parameters district heating network. Schematic, technological diagrams. Hydraulic calculations of primary and secondary circuits. Fittings, devices and thermal insulation matching. Filling and refilling systems. Water, sewage and ventilation systems in a heating substation room. Presentation in the field of heating systems.</p>		
Prerequisites and co-requisites	<p>Basics of hydraulics and thermodynamics. Knowledge from the courses: Thermal engineering and heating, Fluid mechanics and hydraulics.</p>		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written exam	50.0%	40.0%
	Project	50.0%	40.0%
	Presentation	50.0%	20.0%
