	[K6_W01] has knowledge of selected branches of mathematics, physics and chemistry, which is a base of construction subjects, such as construction theory and material technology and is needed to formulate and solve typical problems of civil engineering	Student solves matrix equations and systems of linear equations. Student analyses tasks from analytical geometry. Student computes partial derivatives and uses differential calculus to examine properties of the function of several variables. Student solves ordinary differential equations, using informations about complex numbers. Student recognizes the importance of skillful use of basic mathematical apparatus in terms of study in future.	[SW1] Assessment of factual knowledge												
	[K6_U02] is able to define basic calculation models used in computer calculations	Student solves matrix equations and systems of linear equations. Student analyses tasks from analytical geometry.
