

Subject card

Subject name and code	BASICS PRESTRESSED STRUCTURES, PG_00044248						
Field of study	Civil Engineering						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Optional subject group		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	4		Language of instruction		Polish		
Semester of study	7		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Marek Wesołowski				
	Teachers		dr inż. Anna Kopańska mgr inż. Maciej Solarczyk dr inż. Marek Wesołowski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		4.0		50.0	84
Subject objectives	Design the prestressed elements in all load conditions.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W06] knows the rules of constructing and dimensioning of building elements of: steel, reinforced concrete, wood, masonry.		The student has knowledge of the specifics of prestressed structures, distinguishing them from reinforced concrete structures.		[SW1] Assessment of factual knowledge		
	[K6_U06] can design steel, concrete (including reinforced), wood and masonry constructions and its elements		The student has the ability to assess the state of stress in prestressed structures.		[SU2] Assessment of ability to analyse information		
	[K6_W16] Has deeper and adequate knowledge of civil engineering, within offered specialization		The student is able to adopt an appropriate structural arrangement in the field of prestressed structures.		[SW3] Assessment of knowledge contained in written work and projects		
	[K6_K01] is aware of necessity of professional and personal competences improvement; complements and broadens his knowledge about modern processes and technologies		The student acquires skills in critical analysis of design solutions in the field of prestressed structures.		[SK5] Assessment of ability to solve problems that arise in practice		
Subject contents	Introduction. Idea of construction prestressing, historical sketch, classification of prestressed constructions. Concrete (mechanical properties, immediate and rheology deformations, estimation of shrinkage and creep effects). Prestressing steel (mechanical properties, relaxation, corrosion protection). Technology of prestressing, post-tensioned beams, pretensioned beams and other technologies. Loss of prestress force, estimation of immediate and rheology losses. Design of post-tensioned and pretensioned beams in elastic phase. Examples of construction of prestressed structures.						
Prerequisites and co-requisites	No requirements						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Project		50.0%		30.0%		
	Midterm colloquium		50.0%		70.0%
