

Subject card

Subject name and code	Fundamentals of engineering concrets structures, PG_00044247											
Field of study	Civil Engineering											
Date of commencement of studies	October 2021	Academic year of realisation of subject		2024/2025								
Education level	first-cycle studies	Subject group		Optional subject group								
Mode of study	Full-time studies	Mode of delivery		at the university								
Year of study	4	Language of instruction		Polish								
Semester of study	7	ECTS credits		5.0								
Learning profile	general academic profile	Assessment form		assessment								
Conducting unit	Department of Concrete Structures -> Faculty of Civil and Environmental Engineering											
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Krystyna Nagrodzka-Godycka										
	Teachers	prof. dr hab. inż. Krystyna Nagrodzka-Godycka dr inż. Paweł Piotrkowski dr inż. Małgorzata Lachowicz										
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM					
	Number of study hours	30.0	15.0	0.0	15.0	0.0	60					
	E-learning hours included: 0.0											
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours	Self-study		SUM					
	Number of study hours	60		5.0	60.0		125					
Subject objectives	Acquiring the ability to design and construct reinforcement for basic reinforced concrete engineering structures											
Learning outcomes	Course outcome		Subject outcome			Method of verification						
	[K6_W16] Has deeper and adequate knowledge of civil engineering, within offered specialization		Defines complex stress states in engineering structures, such as reinforced concrete arches, crane beams, stairs, reinforced deep beams, knows the methods of their dimensioning and the way of their construction.									
	[K6_K02] is responsible for reliability of obtained results of research and its interpretation, formulates conclusions and describes results of own work		Student designs two-way R-C structure. All the results given in the project are justified in detail and the drawings are precisely described.									
	[K6_U04] can correctly choose tools (analytical or numerical) to solve engineering problems in design of structures or construction process		He knows the basic computer programs supporting the design of reinforced concrete structures and the standard procedures in accordance with European recommendations									
	[K6_W06] knows the rules of constructing and dimensioning of building elements of: steel, reinforced concrete, wood, masonry.		Correctly defines the impact on engineering structures, correctly applies calculation procedures in accordance with European standards and makes detailed construction drawings									
Subject contents	Design of stairs; types of stairs, reinforcement details. Crane Beams: fatigue problem regarding to EN Code rules. Design of R-C arches. Deep beams based on theory and experimental tests, application in engineering structures, design methods and construction details. Tanks for fluid above and underground, loads, static calculation, design methods and construction details. Retaining walls. Types of retaining walls. Forces on retaining walls. Stability against overturning. Design requirements.											
Prerequisites and co-requisites												

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	test	50.0%	50.0%
	design	50.0%	50.0%
