

Subject card

Subject name and code	MAINTENANCE AND REVALORIZATION OF STEEL STRUCTURES, PG_00044253						
Field of study	Civil Engineering						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Optional subject group		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	4		Language of instruction		Polish		
Semester of study	7		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Metal Structures -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Dariusz Kowalski				
	Teachers		dr inż. Dariusz Kowalski				
			dr inż. Aleksander Perliński				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		15.0	50
Subject objectives	Introduction to rules related to proper maintenance, refit and modernization of steel building objects						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W09] knows the principles of determining of loads acting on basic constructions (e.g. general, industrial, bridge, water, marine, transport objects) and rules of its constructing		The student learned the rules for determining the loads on the structures of building objects, in particular those made of steel. The student became acquainted with the principles of constructing objects that have changed over the years of development of steel construction				
	[K6_U12] knows rules of manufacturing and application of building materials, is able to properly choose tchem; is able to make simple laboratory experiments for judging quality of building materials		The student learned the research methods in the field of assessing the correctness of the construction, in particular, welded joints and anti-corrosion coatings				
	[K6_W16] Has deeper and adequate knowlege of civil engineering, within offered specialization		The student learned about the problems of operation and maintenance of building structures, especially those made of metal				
	[K6_U11] knows and applies rules of construction law; can estimate risk of construction works and implement proper security routines; obeys the rules of occupational safety and health		The student learned the legal conditions relating to the operation and maintenance of buildings. The student learned the methods of safety assessment of the exploited metal structures.				

Subject contents	Lecture: Activities performed before the decision about the repair or refurbishment of building object. Use of steel structures for concrete and masonry structures refurbishment. Maintenance and revalorization of monument buildings. Buildings relocation. Revalorization of public buildings. Revalorization of halls. The use of helicopters for repair and revalorization of buildings and engineering structures.		
	Exercises: Strengthening the structure. Anticorrosive maintenance of the structure. Design basics in terms of anti-corrosion protection. Construction cleaning. Paint and metallization coatings.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	written lecture test	60.0%	60.0%
	projects results	60.0%	40.0%
