

Subject card

Subject name and code	URBAN RAIL TRANSIT SYSTEMS, PG_00044673								
Field of study	Transport								
Date of commencement of studies	October 2021	Academic year of realisation of subject		2024/2025					
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study				
Mode of study	Full-time studies		Mode of delivery		at the university				
Year of study	4		Language of instruction		Polish				
Semester of study	7		ECTS credits		4.0				
Learning profile	general academic profile		Assessment form		assessment				
Conducting unit	Department of Transportation Engineering -> Faculty of Civil and Environmental Engineering								
Name and surname of lecturer (lecturers)	Subject supervisor Teachers		dr inż. Jacek Szmagliński						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM		
	Number of study hours	30.0	0.0	0.0	15.0	0.0	45		
E-learning hours included: 0.0									
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM		
	Number of study hours	45		10.0		45.0	100		
Subject objectives	<p>The aim of the course is to prepare the student to planning and designing urban rail transport routes. The means of urban rail transport that will be discussed on the subject are tram, high-speed city rail, metro and other means of transport combining the features of the above. Technical requirements for pavement design and track geometry in Poland and around the world will be presented. Information on the location and design of tram stops, stations and integration nodes will be provided.</p>								
Learning outcomes	Course outcome		Subject outcome		Method of verification				
	[K6_W18] has proficiency in transport infrastructure as appropriate for their specialty		Is able to develop rules for the integration of various transport modes. Knowledge of basic forms of urban rail transport. Understands the need for planning transport systems and can indicate the effects of planning decisions.		[SW1] Assessment of factual knowledge				
Subject contents	[K6_U12] able to select tools and methods, carry out assessments and simple tests of transport systems to an extent required of the specialty / learning profile		Is able to design a fragment of a double-track tram road, a junction and a terminal. Can assess the condition of the track and the condition of its components. Is able to design a cross section of track surface and stops. Knows the rules of tram traffic control and other means of urban rail transport.		[SU1] Assessment of task fulfilment				
	1. Rail City Transport - admission to lectures,2. Description of vehicles and tram routes and high-speed city rail,3. Description of vehicles and metro routes, two-system tram, pre-metro and fast tram,4. Integration nodes - description of solutions and functional requirements,5. Integration nodes - detailed technical solutions,6. Designing of tram routes - horizontal geometry,7. Tramway design - vertical and cross-sectional geometry,8. Designing tram stops,9. Construction of rail surfaces - ballast,10. Construction of rail surfaces - ballastless,11. Outdoor activities on the tracks,12. Outdoor activities on the tram depot,13. Tram switches - geometry,14. Tram switches - controls,15. Repetition of material.								
Prerequisites and co-requisites									

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	test	60.0%	55.0%
	design excercise	100.0%	45.0%
