| Subject name and code | Surveying I (team project), PG_00050189 | | | | | | |
| Field of study | Geodesy and Cartography | | | | | | |
| Date of commencement of studies | October 2021 | Academic year of realisation of subject | | | 2021/2022 | | |
| Education level | first-cycle studies | Subject group | | | Obligatory subject group in the field of study Subject group related to scientific research in the field of study | | |
| Mode of study | Full-time studies | Mode of delivery | | | at the university | | |
| Year of study | 1 | Language of instruction | | | Polish | | |
| Semester of study | 2 | ECTS credits | | | 7.0 | | |
| Learning profile | general academic profile | Assessment form | | | assessment | | |
| Conducting unit | Department of Geodesy -> Faculty of Civil and Environmental Engineering | | | | | | |
| Name and surname of lecturer (lecturers) | Subject supervisor | | dr inż. Tadeusz Widerski | | | | |
| | Teachers | | dr inż. Marek Zienkiewicz dr inż. Karolina Makowska-Jarosik | | | | |
| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | Project | Seminar | SUM |
| | Number of study hours | 50.0 | 50.0 | 0.0 | 0.0 | 0.0 | 100 |
| | E-learning hours included: 0.0 Adresy na platformie eNauczanie: | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan | Participation in consultation hours | | Self-study | SUM | |
| | Number of study hours | 100 | 15.0 | | 60.0 | 175 | |
| Subject objectives | The aim of the course is to provide the knowledge of the methodology of horizontal and vertical measurements for the purposes of large-scale map developing, including the theoretical knowledge in the field of both measurement technology as well as standards and technical guidelines resulting from applicable regulations. Students learn the specifics of conducting extensive geodetic works as part of teamwork, which is necessary in order to complete a complex and comprehensive geodetic project. | | | | | | |
| Learning outcomes | Course outcome | | Subject outcome | | Method of verification | | |
| | [K6_W07] has a well-established knowledge and understands concepts in the field of engineering geodesy including the use of calculations and measurements methods carried out with the use of geodetic instruments and photogrammetric and remote sensing technologies related to geodetic support for investment, surveying and inventory measurements and photogrammetry with remote sensing | | The student performs: - situational measurements by rectangular offset and by the use of tachymetry, - height measurements by the use of tachymetry, geometric leveling and leveling by the method of distributed points, - adjustment of surveyed polygons with the approximate method, - calculates situational and height coordinates. | | [SW3] Assessment of knowledge contained in written work and projects | | |
| [K6_U11] is able to develop geodetic documentation and perform individually as well as in a group, field and field surveying surveys | | The student: - performing of situational and height maps, - completing measurement and technical documentation. | | [SU2] Assessment of ability to analyse information [SU5] Assessment of ability to present the results of task [SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools | | | |

| | |
|---------------------------------|--|
| Subject contents | <p>Lectures:</p> <ol style="list-style-type: none"> 1. ITRF / ETRF reference frames and their transfer to the territory of Poland. 2. Reference frames in force in Poland 3. Coordinate frames in force in Poland 4. Plane rectangular coordinates frames in force in Poland 5. Transformations between frames 6. Gravimetric and Magnetic network 7. Methodology of using real-time GNSS measurements in establishing the geodetic network and the performance of situational and height measurements. 8. Adjustment of geodetic observations by the approximate method in the C-Geo software (leveling traverse, polygon traverse) 9. Adjustment of geodetic observations by the method of least squares estimation in the C-Geo software (leveling traverse, polygon traverse) 10. Basic information on mapping and editing a situational and height map. 11. Geodetic documentation submitted with the completion of geodetic works. <p>Laboratories - Development of a situational and height map:</p> <ol style="list-style-type: none"> 1. Initial analysis of the measuring object and verification of the location of existing horizontal and height reference points, 2. Designing the location of reference points and their stabilization, 3. Making sketches of the reference points and its topographic descriptions, 4. Situational measurement of geodetic polygons, 5. Height measurement of geodetic polygons, 6. Adjustment of geodetic polygons by approximate method, 7. Situational-height measurement of terrain details, 8. Calculation of situational and height coordinates of measurement pickets, 9. Performing of situational and height map, 10. Making a technical report. |
| Prerequisites and co-requisites | Ability to handle traditional and modern geodetic instruments. Basic knowledge of the geodetic softwares that can be used for measurements processing and results visualization. . |

| Assessment methods and criteria | Subject passing criteria | Passing threshold | Percentage of the final grade |
|--|---|--|-------------------------------|
| | | The correct performance of the report on situational-height measurements. | 100.0% |
