Subject objectives

Expanding knowledge and deepening the ability to use advanced digital tools for creating complex geometric structures and free (curvilinear) forms.

Expanding the knowledge and deepening the skills of using advanced rendering engines simulating the physical features of the real world in order to present designed architectural objects.

Gaining knowledge about the current directions of development of tools for advanced modeling of architectural objects (parametric modeling, animation, BIM).

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K6_U04] is able to use analytical methods to formulate and solve project tasks	The student is able to use the possibilities of processing and obtaining design information using digital tools for 3D geometry modeling and visualization.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information
[K6_U03] is able to prepare a graphic, written and oral presentation of your own design concepts in the field of architecture and urban planning, meeting the requirements of a professional record appropriate for architectural and urban design	The student knows the specifics and possibilities of various computer tools and is able to choose the appropriate digital tool for the project task (drawing, modeling, documentation development). Understands the role of architectural visualization in communicating the design idea.	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools
