

Subject card

Subject name and code	CHEMICAL ENGINEERING, PG_00036515						
Field of study	Chemistry						
Date of commencement of studies	October 2021	Academic year of realisation of subject			2022/2023		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			6.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Process Engineering and Chemical Technology -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Iwona Hołowacz				
	Teachers		dr inż. Iwona Hołowacz dr inż. Piotr Rybarczyk dr inż. Izabela Wysocka				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	30.0	0.0	0.0	75
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	75		5.0		70.0	150
Subject objectives	To familiarize students with the basic concepts of dynamic operations, the heat exchange processes and the mass exchange processes. Presenting students with opportunities to use mathematical equations in the description of the unit operations used in chemical engineering. Developing students' computing skills for the relevant unit operations. To familiarize students with the construction, principle of operation and characteristics of instruments for measuring pressure, fluid flow velocity and apparatus for conducting unit operations.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U06] can analyze the functioning of equipment, apparatus and technology lines used in laboratories and chemical industry, and can recognize and propose methods to solve the simple engineering tasks which he can meet as an Engineer and select and use routine methods, chemical apparatus and tools to solve practical engineering tasks, including also technological processes; can himself/herself read and make technical drawings using CAD software	The student is prepared to use mathematical and physicochemical knowledge to calculate and analyze the course of basic unit operations in chemical engineering. The student knows how to make measurements of fluid motion parameters during dynamic, thermal and diffusion processes. The student can: - determine fluid movement parameters and design a typical hydraulic system for the chemical industry on the basis of mass and energy balance - apply theories of solids motion in fluids for basic calculations in filtration processes, gas dedusting and suspension sedimentation - determine heat fluxes for established conduction, penetration and thermal radiation processes - perform thermal calculations for heat exchangers - write mass and heat balances and apply these equations in distillation, condensation, rectification, extraction and drying processes	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools
	[K6_U04] can use professional vocabulary, can prepare and communicate technical information in the form of text documents, spreadsheets, charts and technological schema	Student individually performs relevant analysis of the collected data.	[SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools
	K6_W10	Student understands and explains fundamental definitions of dynamic operations, heat exchanges of mass transfer processes in the environmental protection and engineering.	[SW1] Assessment of factual knowledge
	[K6_K03] understands the importance of group and team activities in which members adopt various roles	Student is involved in team work during laboratory exercises. The student proposes and chooses the method of timely implementation of reports.	[SK3] Assessment of ability to organize work [SK1] Assessment of group work skills
Subject contents	Fundamentals of fluid statics. Flow of ideal fluids, Bernoulli's equation. Flow of real fluids: laminar and turbulent flow. Flow resistance in the tubes and through a packed bed. Type of pumps. Free settling. Hydraulic classifier. Dust settling chamber. Sedimentation. Filtration. Heat transfer: heat conduction, free and forced convection, radiation. Heat exchangers. Distillation. Condensation. Periodic rectification. Countercurrent absorption, number of theoretical plates; the efficiency of the plate; height of the packed bed. Extraction: single contact extraction, co-current multistage extraction, Drying of porous solids: parameters of humid air, equilibrium and kinetics of drying.		
Prerequisites and co-requisites	Properties of liquids and gases. Basic knowledge of physical chemistry. Differential and integral calculus. Knowledge of the structure and operation of typical instruments and equipment used in the chemical and related industries. Basic knowledge of reading of technical drawing.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Practical exercises	100.0%	25.0%
	Midterm colloquiums	60.0%	25.0%
	Written exam	60.0%	50.0%

	eResources addresses	
Example issues/ example questions/ tasks being completed	<p>1. In the Howard chamber, the air dusted with particles with a diameter from d_1 to d_2 ($d_2 > d_1$) should be cleaned at t_p temperature. The density of the solid is s. The dimensions of the chamber are known. What condition should be met so that the air leaving the chamber is free of solid particles.</p> <p>2. A model mixer with known dimensions should be 10 times larger for industrial purposes, maintaining the geometric similarity and the unit power consumption.</p> <p>How should the rotational speed of the agitator be changed in relation to the model value, assuming turbulent mixing?</p> <p>3. A shell-and-tube heat exchanger of known dimensions is heated by a stream of heating steam at the pressure p, flowing into the inter-tube space. A water solution with a temperature ranging from t_f flows to the exchanger tubes. Specify how, on the basis of the above-mentioned data, to calculate the heat exchange surface in the exchanger and the driving force of the heat exchange. Report the assumptions made.</p> <p>4. Water at temperature t flows from an open tank with a large cross-section through the pipe with a pressure P at its outlet. What should be the height of the liquid level in the tank above the level of the discharge outlet from the pipe so that the volume flow rate of liquid from the conduit is V. Two 90° elbows and a valve are mounted on the pipe. Data: diameter and length of all pipe sections. Determine the fluid pressure at the inlet to the pipe.</p> <p>5. Draw the course of the relationship of the pressure drop of the fluid as a function of the linear velocity of the fluid flowing through the porous layer, if the fluid reaches the bottom of the packed column. Mark the minimum and maximum fluidization speed and explain their meaning. Characterize the bed state for $u < u_{max}$. How the fluidization curve will change and why if: we reduce the bed height; we will increase the density of the solid; we will reduce the particle size of the solid. The comparison should be made on a common graph.</p> <p>6. Define the concept of volatility and relative volatility for a two-component mixture. Give the equation describing the relationship between the composition of the liquid and gas phases for systems applying Raoult's law. Present a diagram of the simple distillation process and describe the principle of operation of the presented system. Show on the graph in the system $t = f(x, y)$ and $y = f(x)$ the course of this process (known feed composition). Write the material balance of the process and the Rayleigh equation. Determine the average composition of the resulting distillate.</p>
