

§ GDAŃSK UNIVERSITY § OF TECHNOLOGY

Subject card

Subject name and code	Glass and ceramic materials, PG_00048226								
Field of study	Chemistry								
Date of commencement of studies	October 2021		Academic year of realisation of subject			2023/2024			
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	3		Language of instruction			Polish			
Semester of study	5		ECTS credits			2.0			
Learning profile	general academic profile		Assessment form			assessment			
Conducting unit	Department of Inorganic Chemistry -> Faculty of Chemistry								
Name and surname	Subject supervisor	nż. Anna Dołę	ga						
of lecturer (lecturers)	Teachers		dr hab. Katarzyna Kazimierczuk						
			prof. dr hab. inż. Anna Dołęga						
		dr hab. inż. Ewa Wagner-Wysiecka							
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
	Number of study hours	15.0	0.0	15.0	0.0		0.0	30	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in classes includ plan	n didactic ed in study	Participation in consultation hours		Self-study		SUM	
	Number of study hours	30		5.0		15.0		50	
Subject objectives	Provide students with basic knowledge about the composition, structure, production and application of ceramics and glasses. Developing students' skills in solving simple problems related to the production and selection of ceramic materials.								
Learning outcomes	Course out	Subject outcome			Method of verification				
	[K6_U01] knows how to get information from literature, databases and other sources, can integrate the information obtained, interpret and critically evaluate it, and draw conclusions, and to formulate and justify the opinions		The student is able to independently obtain information on the manufacture and properties of glass and ceramic materials from literature			[SU5] Assessment of ability to present the results of task [SU1] Assessment of task fulfilment			
	the chemical processes and algorithms of mathematical models which are necessary for the design of technological processes, knows chemical structure of contemporary materials and its relation to their properties, enabling the selection of the materials for sustainable development technology and material-efficient and energy- efficient methods		The student knows how the			[SW1] Assessment of factual knowledge			
	K6_W03		internal (molecular) structure of a material influences its properties.			[SW1] Assessment of factual knowledge			

Subject contents	Lecture:					
	 Crystalline and amorphous solids; bonds in a solid: metallic, ionic, covalent bonds Selected mechanical properties of materials Glass and its types: calcium-sodium, borosilicate, quartz, tellurite, ITO, etc. Obtaining and forming glass Composites with glass: reinforced, laminated, bulletproof glass Amorphous metals (metallic glasses) Ceramic materials - general characteristics; quartz materials, silicic acids, silicates, aluminosilicates. Ordinary and noble ceramics. Refractory products. Ceramics in technology and industry. Bioceramics - general characteristics, division of bioceramics: bioresorbable, neutral, bioactive porous materials. Ceramic magnets Oxide layers on a metallic substrate Super-hard materials Laboratory: Obtaining glasses by sol-gel method. Obtaining ceramic materials by sintering. Analysis of the obtained materials: FT-IR, AAS. A visit to the Lubiana porcelain factory. 					
Prerequisites and co-requisites						
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade			
	Test	50.0%	67.0%			
	Test and laboratory report	50.0%	33.0%			
Recommended reading	Basic literature	R. Pampuch, Współczesne materiały ceramiczne, Uczelniane Wyd. Naukowo-Dydaktyczne AGH, Kraków 2005				
	Supplementary literature	. R. Pampuch, K. Hajerko, M. Kordek, Nauka i procesach ceramicznych, Wyd. Naukowe PWN 1992				
	eResources addresses	Adresy na platformie eNauczanie:				
Example issues/ example questions/ tasks being completed	 List the types of glass (due to the oxide composition) Discuss the structure and properties of soda-lime and quartz glass What raw materials are included in the glass set, how do these raw materials behave during heating? What can glass be tinted with? What are the ways of forming glass? How is toughened glass made? How are produced and what are the properties of composites: laminated glass, armored glass Discuss the structure of quartz. Discuss the structure of quartz. Discuss the methods of obtaining fused quartz and fused silica and application of these materials Present the sol-gel method of obtaining glassy silica - discuss the substrates, the mechanism of the reaction catalyzed by acids and bases Discuss the preparation and reactivity of orthosilicic acid How mesoporous silica is obtained Discuss the physicochemical properties and reactivity of alumina Present the reactions taking place in the Bayer process of obtaining alumina, What is the sintering process? What is the sintering process? 					
Work placement	Not applicable
