

## Subject card

Subject name and code	Mathematics, PG_00053079						
Field of study	Chemistry						
Date of commencement of studies	October 2021	Academic year of realisation of subject	2021/2022				
Education level	first-cycle studies	Subject group	Obligatory subject group in the field of study				
Mode of study	Full-time studies	Mode of delivery	at the university				
Year of study	1	Language of instruction	Polish				
Semester of study	2	ECTS credits	9.0				
Learning profile	general academic profile	Assessment form	exam				
Conducting unit	Mathematics Center -> Vice-Rector for Education						
Name and surname of lecturer (lecturers)	Subject supervisor	dr Anita Dąbrowicz-Tłałka					
	Teachers	dr Anita Dąbrowicz-Tłałka mgr Dorota Garbowska					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	45.0	60.0	0.0	0.0	0.0	105
	E-learning hours included: 0.0						
	WCh - Bt, Ch, ChB, TCh – s2: 2021/22 (A.Tłałka) - Moodle ID: 19961 <a href="https://enauczanie.pg.edu.pl/moodle/course/view.php?id=19961">https://enauczanie.pg.edu.pl/moodle/course/view.php?id=19961</a>						
	Additional information:						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	105	10.0	110.0	225		
Subject objectives	The aim of this subject is to obtain the students competence in the range of using the basic methods of mathematical analysis and linear algebra. Furthermore, the student is able to use this knowledge to solve simple theoretical and practical problems that can be found in the field of engineering.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W01] has basic knowledge of selected areas of mathematics, including: algebra, differential calculus and integral calculus, functions of two variables, elements of analytical geometry, elements of vector analysis, differential equations and probability theory, and knowledge of physics: basic equations and concepts and physical laws, including the knowledge necessary to predict the course of physical phenomena and to solve various technical problems	Student examines the convergence of the number series. Student determines the convergence range of the power series. Student defines basic notions of matrix calculus. Student uses basic notions and formulas of matrix calculus in solving systems of linear equations. Student analyses properties of a given function of two variables using differential calculus of several variables functions. Student uses double and triple integral in geometrical applications. Student determines gradient, divergence and rotation as well as field potential. Student demonstrates some chosen techniques of solving ordinary differential equations. Student gives the definition of basic notions of probability theory. Student describes the basic types of distributions of random variable.	[SW1] Assessment of factual knowledge
	[K6_U04] can use professional vocabulary, can prepare and communicate technical information in the form of text documents, spreadsheets, charts and technological schema	Student recognizes the importance of skillful use of basic mathematical apparatus in terms of technical study in future.	[SU2] Assessment of ability to analyse information
	[K6_K01] understands the need for lifelong learning, can inspire and organize the process of teaching other people	Student is able to process the acquired information, analyze and interpret it, draw conclusions and reason opinions.	[SK2] Assessment of progress of work
Subject contents	<p>Number series: Convergent and divergent series. Convergence tests of the number series.</p> <p>Power series: Radius and interval of convergence of power series.</p> <p>Elements of linear algebra: Matrices, their properties and operations on matrices. Determinants. Inverse of a square non-singular matrix. Dot product, cross product, their properties and its applications. The triple scalar product and applications.</p> <p>Systems of linear equations. Cramer patterns. The rank of the main and completed matrix. Kronecker-Capelli theorem. Gaussian elimination method.</p> <p>Functions of two variables: Partial derivatives. Total differential.</p> <p>Taylor's formula. Maxima and minima of a function of several variables.</p> <p>Multiple integrals: Normal and regular area. Double and triple integral. Change of variables - polar, cylindrical and spherical coordinates. Examples of applications.</p> <p>Elements of field theory: scalar and vector fields. Gradient, divergence, rotation.</p> <p>Ordinary differential equations: First order linear differential equations. Linear differential equations order <math>n</math> with constant coefficients.</p> <p>Calculus of probability: Discrete and continuous random variable, distribution function, expected value and variance of a random variable. Basic distribution of a random variable.</p>		
Prerequisites and co-requisites			

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Class work	0.0%	10.0%
	Midterm tests	0.0%	40.0%
	Written exam	50.0%	50.0%
