

Subject card

Subject name and code	Membrane technologies in enviromental protection, PG_00052323						
Field of study	Chemical Technology						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2023/2024		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Chemistry and Technology of Functional Materials -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Radosław Pomećko				
	Teachers		dr inż. Radosław Pomećko dr inż. Mariusz Szkoda dr inż. Konrad Trzciński Daria Roda				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		15.0	50
Subject objectives	The aim of the course is to familiarize with membrane processes currently used on an industrial scale. Mechanisms of mass transport in membrane processes as well as parameters characterizing these processes will be presented.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K6_W04		The student knows the basic groups of membranę processes, their characteristics and proces parameters. The student can give examples of the membrane proces applications, leading to the reductions of pollutant emitions or more favorable use of raw materials.		[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	K6_U04		The student can propose a membrane process which gives expected separation effects for the specified mixture. The student uses information on membranę transport to control laboratory experiments.		[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject		

Subject contents	<p>1) Definitions and key parameters of porous membranes selectivity.</p> <p>2) Dimensions and types of solutes separated by MF, UF, NF and RO techniques.</p> <p>3) Schematic classification of membrane morphology.</p> <p>4) Methods for synthesis of porous membranes.</p> <p>5) Advantages of asymmetric porous membranes in comparison to symmetric membranes.</p> <p>6) Scaling and fouling phenomena. How to limit these effects?</p> <p>7) Comparison of NF and RO techniques in terms of parameters and effects of these processes.</p> <p>8) Mass transport mechanisms in liquid membranes.</p> <p>9) Phenomena affect the stability of liquid SLM membrane.</p> <p>10) Parameters of polymers applied as a matrix for SLM membranes.</p>		
Prerequisites and co-requisites	Knowledge: mathematics, basics of physical chemistry, basic of organic chemistry		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
		60.0%	60.0%
		51.0%	40.0%
