GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Computer Aided Design, PG_00036287		
Field of study	Green Technologies		
Date of commencement of studies	October 2021	Academic year of realisation of subject	2023/2024
Education level	first-cycle studies	Subject group	Obligatory subject group in the field of study Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	3	Language of instruction	Polish
Semester of study	5	ECTS credits	3.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Department of Process Engineering and Chemical Technology -> Faculty of Chemistry		
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Iwona Cichowska-Kopczyńska	
	Teachers		

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	0.0	0.0	0.0	45.0	0.0	45

E-learning hours included: 0.0

Additional information:
Attendance at classes is mandatory. Absence is justified by a medical certificate. One unexcused absence is allowed.

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	45	2.0	28.0	75

Subject objectives

The aim of the course is to present the possibilities offered by the computer aided design software, the principles of software, selection of the software to solve a particular problem and algorithms of the design processes.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K6_U04] capable of formulating and solving design tasks in the field of environmental technology to recognize their non-technical aspects, including environmental, economic and legal. Is capable of applying the principles of occupational health and safety. Is able to make initial assessment of engineering solutions and actions	The student is able to assess the impact of various factors and technological parameters on the environment, including the economic environment, the natural environment, and the work environment. Is able to analyze risk and propose a method to minimize the impact of negative aspects.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
[K6_W04] is aware of the importance of environmental protection and has a basic knowledge of chemical and biological threats to the environment, with particular emphasis on anthropogenic factors, has a basic knowledge of knowledge of the principles of sustainable development as well as national and European environmental management conditions.	The student is able to correctly identify the factors and effects and proposes a solution independently.	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects
[K6_U03] is able to use information and communication technologies relevant to the common tasks of engineering, is able to use known methods and mathematical-physical models to describe and explain phenomena and chemical processes	The student is able to choose the appropriate tool and model to solve a specific problem, and is able to solve the problem using it.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task

Subject contents

Graphical representation of technological processes, including graphical representation of spatial elements on a plane: projection as the basic form of spatial projections on a plane, spatial projections in orthographic projections, adjacent and parallel elements in orthographic projection, perpendicularity of straight lines and planes. Cross-sections and penetration of flat and spatial objects. Spatial, assembly and manufacturing drawings. Technical Documentation. Strength analysis, simulations.

Simulations of technological processes, thermodynamic models, principles of simulation, sensitivity analysis, material and energy balances, optimization of technological processes.

Prerequisites and co-requisites

Computer skills, knowledge of the office software, geometry, dimensioning principles, basics of thermodynamics, process engineering, chemical technology, technological principles, principles of green chemistry, green engineering.

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Simulations	60.0%	30.0%
Additional tasks	60.0%	10.0%
Process design	60.0%	30.0%
Graphic representation	60.0%	30.0%
