

## Subject card

Subject name and code	Physics, PG_00036250						
Field of study	Green Technologies						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2021/2022		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		6.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Physics of Electronic Phenomena -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Tomasz Wąsowicz				
	Teachers		dr hab. Tomasz Wąsowicz				
			dr inż. Ireneusz Linert				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	30.0	0.0	0.0	75
	E-learning hours included: 0.0						
	Adresy na platformie eNauczanie: Wykład FIZYKA dla BT i ZT 21/22 - sem. zimowy - Moodle ID: 15124 <a href="https://enauzanie.pg.edu.pl/moodle/course/view.php?id=15124">https://enauzanie.pg.edu.pl/moodle/course/view.php?id=15124</a>						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	75		5.0		70.0	150
Subject objectives	The aim is to demonstrate laws of physics						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W01] has a basic knowledge from some branches of mathematics and physics useful for formulating and solving simple problems in the field of environmental technologies and modern analytical methods		Student knows physics and mathematics, which are used in environmental technologies.		[SW1] Assessment of factual knowledge		
	[K6_U05] can formulate and solve engineering tasks analytical methods, simulation as well as experimental, able to apply knowledge of basic physics and mathematics to analyze the results of experiments, is able to analyze and assess existing technical solutions		Student knows how to use law of physics in daily life		[SU3] Assessment of ability to use knowledge gained from the subject		
	[K6_K02] is aware of the social role of a technical college graduate, take the reflections on the ethical, scientific and social aspects of the work performed, understands the need to promote, formulating and providing the public with information and opinions concerning the activities of the profession of engineer.		Student is prepared to be engineer		[SK5] Assessment of ability to solve problems that arise in practice		

## Subject contents

### Lecture and Tutorials:

About physics. Physical quantities and their units. Elements of vector algebra. Kinematics of a particle: linear motion, circular motion, Newton's laws of motion. Dynamics of rigid body: the moment of inertia, principal axes, Steiner's law, torque and angular momentum, equation of rotational motion, gyroscopes and precession. Conservation laws in mechanics. Pressure in a Liquid at Rest. Pascal's Principle and Archimedes' Principle. Bernoulli's Law. Oscillations and mechanical waves. Simple, damped and driven vibrations. Mechanical resonance. Beats. Types of waves. The equation of motion for harmonic plane waves. Wave velocity. Examples of diffraction and interference of waves. Standing waves. Doppler effect. Sound intensity level. Temperature and Heat. Laws of Thermodynamics. Electric field. Coulomb's law. The intensity of the electric field. The electrical potential. The relationship between the intensity of the electric field and potential. An electric dipole and its behavior in an external electric field. Capacitance of the electric capacitor. Comparison of basic characteristics of the electric field and gravity. Magnetic field. Magnetic induction vector. The Lorentz force. Biot-Savart law. Electrodynamics. The interaction of two straight linear wires carrying an electric current. Magnetic dipole and its behavior in an external magnetic field.

### Laboratory:

1. Determination of Young's modulus by the resonance method
2. Determination of the acceleration due to gravity using a simple pendulum
3. Determination of the moment of inertia of a solid
4. Determination of the coefficient of rigidity of a wire
5. Measurement of the velocity of a sound in air
6. An investigation of the pressure dependence of the boiling point of water
7. Determination of the specific latent heat of vaporization of water
8. Determination of ratio of the specific heats  $c_p/c_v$  of air
9. Measurement of the electrochemical equivalent of copper and the Faraday constant
10. Measurement of capacitance using an alternating current bridge
11. An investigation of an alternating current circuit RLC
12. Determination of the horizontal component of the Earth's magnetic field
13. Determination of the characteristic curves of the diode valve
14. Measurement of the absorption coefficient for  $\gamma$ -rays
15. Determination of the refractive index of glass
16. Determination of the wavelength dependence of the refractive index of a glass prism
17. Measurement of the radius of curvature of a lens by the method of Newton's ring
18. Determination of the Rydberg constant

Prerequisites and co-requisites	Mathematics and physics from lyceum		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Tutorials: Written tests	50.0%	30.0%
	Lecture: Written exam	50.0%	50.0%
	Laboratory: Reports and tests	100.0%	20.0%
Recommended reading	Basic literature	1. D. Halliday, R. Resnick, J. Walker, Fundamentals of physics, Wiley 2008  2. W.S. Wolkensztejn, Problems in Physics, PWN 1974	
	Supplementary literature	1. J. Orear, Physics, Macmillan Publishing Co, 1979  2. W. Hajko, Physics in Examples, WNT 1967	
	eResources addresses	Wykład FIZYKA dla BT i ZT 21/22 - sem. zimowy - Moodle ID: 15124 <a href="https://enauczanie.pg.edu.pl/moodle/course/view.php?id=15124">https://enauczanie.pg.edu.pl/moodle/course/view.php?id=15124</a>	
Example issues/ example questions/ tasks being completed	1. Moment of inertia . Determination of the moments of inertia of molecules 2. The principle of conservation of angular momentum. 3. Examples of harmonic oscillators : simple and physical pendulum, the weight attached to a spring 4. Damped motion. During time $t_1$ the amplitude of vibrations decreased $n_1$ times. How many times will decrease the amplitude of vibrations in the time $t_2$ ? 5. Doppler effect. 6. Comparison of the basic features of the gravity and electrostatic fields 7. Comparison of the basic features of the electrostatic and magnetostatic fields 8. Electric dipole . Electric dipole moment . The behavior of the dipole in an external electric field. 9. Magnetic dipole. The magnetic dipole moment. The behavior of the dipole in an external magnetic field 10. The interaction between two straight parallel conductors carrying electric current . The definition of the ampere 11. Lorentz force. Definition of tesla. Motion of charge on a circular orbit in a uniform magnetic field. 12. Motion of charge in electric field ( $mv^2 / 2 = eU$ ) . Definition of electronvolt 13. Capacitor and coil. Capacitance and inductance. Definition of farad and henry.		
Work placement	Not applicable
