

Subject card

Subject name and code	Waste management and waste disposal, PG_00048773						
Field of study	Green Technologies						
Date of commencement of studies	October 2021	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			English		
Semester of study	6	ECTS credits			5.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Colloid and Lipid Science -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Ilona Kłosowska-Chomiczewska					
	Teachers	dr inż. Ilona Kłosowska-Chomiczewska dr inż. Aneta Pacyna-Kuchta					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	15.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		15.0		50.0	125
Subject objectives	The aim of the course is to present various aspects and information regarding waste, such as such as waste management policy, types of waste, its collection, segregation and disposal methods.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_U04] capable of formulating and solving design tasks in the field of environmental technology to recognize their non-technical aspects, including environmental, economic and legal. Is capable of applying the principles of occupational health and safety. Is able to make initial assessment of engineering solutions and actions	The student is able to start a discussion regarding waste management, and present your point of view. He is consistent in carrying out the tasks entrusted to him, updates knowledge regarding the latest solutions in scope of economy and waste disposal, understands the need for updates knowledge in this area. Student knows and can apply basic rules occupational health and safety applicable in technologies environmental protection. Student has basic knowledge in the field technology design environmentally friendly and basic methods analytical.	[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information
	[K6_W03] has a basic knowledge of soil, air and water pollutants, design and supervision of environmentally friendly technologies and technologies which do not produce waste, knows technology of cleaning and neutralization of industrial waste and wastewater management, has a basic understanding of the theoretical basis of methods and types of apparatus used in chemical analysis of environmental pollutants	The student has basic knowledge of scope of friendly technologies for the environment and technology waste-free. He has knowledge on topic currently used solutions in the field waste management, especially in the European Union.	[SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge
	[K6_K02] is aware of the social role of a technical college graduate, take the reflections on the ethical, scientific and social aspects of the work performed, understands the need to promote, formulating and providing the public with information and opinions concerning the activities of the profession of engineer.	The student is able to use properly selected methods and enabling devices measurement of basic quantities characterizing processes technological and condition environment. The student has and can apply the knowledge necessary to social understanding, economic, legal and other non-technical business conditions engineering. He can use it acquired knowledge for the purpose modification of existing solutions used in protection environment.	[SK2] Assessment of progress of work [SK5] Assessment of ability to solve problems that arise in practice [SK4] Assessment of communication skills, including language correctness
Subject contents	Lectures: Legal aspects of municipal solid waste management. Legal regulations of the economy waste in Poland and the EU. Waste classification, definitions. Municipal waste: characteristics, quantity and quality. Segregation. Recycling. Storage of waste in municipal waste landfills. Main design and operational requirements for municipal waste landfills. Physical, chemical and processes biological events occurring during waste storage. Biogas recovery. Problems of leachates from characteristics of landfills, treatment methods. Composting of organic waste. Process conditions, compost classification. Composting methods. Thermal methods of waste disposal. Pyrolysis and combustion. Co-combustion with the addition of solid fuels. Methane fermentation of organic waste. Process conditions, fermentation methods. Use and recovery of important raw materials economy, e-waste. Seminar: Presentation of selected problems in the field of waste management, student project on issues related to waste management Laboratories: Methane fermentation, composting, landfill leachate analysis		
Prerequisites and co-requisites	Knowledge of concepts and definitions in the field of general chemistry and environmental chemistry. Knowledge chemical technology. Knowledge of occupational health and safety regulations and rules of work in the laboratory.		

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written exam	60.0%	60.0%
	Laboratory	60.0%	20.0%
	Seminary	60.0%	20.0%

	eResources addresses	Adresy na platformie eNauczenie: 2024 Waste Management and Waste Disposal - Moodle ID: 35043 https://enauczenie.pg.edu.pl/moodle/course/view.php?id=35043	
Example issues/ example questions/ tasks being completed	1. Please describe what physical, biological and chemical transformations solid waste may undergo .2. What physicochemical properties of waste may significantly affect waste management? Explain Why. Describe the method for assesing two selected properties.		
Work placement	Not applicable
