

Subject card

Subject name and code	, PG_00037602						
Field of study	Green Technologies						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	4		Language of instruction		English English		
Semester of study	7		ECTS credits		5.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Analytical Chemistry -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Agata Kot-Wasik				
	Teachers		prof. dr hab. inż. Agata Kot-Wasik dr inż. Paweł Kubica prof. dr hab. inż. Andrzej Wasik dr hab. inż. Weronika Hewelt-Belka dr inż. Tomasz Majchrzak				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	15.0	75
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	75		3.0		47.0	125
Subject objectives	The aim of the course is to present issues in the field of classic and modern techniques for separating mixtures, taking into account aspects of green and white chemistry and sustainable technology management.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W03] has a basic knowledge of soil, air and water pollutants, design and supervision of environmentally friendly technologies and technologies which do not produce waste, knows technology of cleaning and neutralization of industrial waste and wastewater management, has a basic understanding of the theoretical basis of methods and types of apparatus used in chemical analysis of environmental pollutants		Student has a basic knowledge concerning separation techniques involved nowadays, for example in soil, air and water pollutants determination, design and supervision of environmentally friendly technologies.		[SW3] Assessment of knowledge contained in written work and projects		
	[K6_U05] can formulate and solve engineering tasks analytical methods, simulation as well as experimental, able to apply knowledge of basic physics and mathematics to analyze the results of experiments, is able to analyze and assess existing technical solutions		Student can formulate and solve engineering tasks analytical methods, simulation as well as experimental.		[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools		

Subject contents	Theoretical basic of separation, extraction, chromatography and electromigration.		
	Green and white chemistry.		
	Pro-environmental technologies.		
	Practical aspects of separation processes used in systems: gas-liquid, gas-solid, liquid-solid, liquid-liquid, solid-supercritical fluid. Extraction techniques (LLE, SPE, SPME, SFE).		
	Filtration, centrifugation, absorption, adsorption, distillation, condensation, crystallization. Membrane techniques. Laboratory and industrial applications.		
	Chromatographic techniques (GC gas chromatography, HPLC liquid chromatography, supercritical fluid chromatography) - theoretical basis, optimization of the chromatographic separation process, applications.		
	Electromigration techniques.		
Hyphenated techniques.			
Prerequisites and co-requisites	Basic knowledge of chemistry, mathematics and physic.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Seminar	60.0%	20.0%
	Lecture	60.0%	60.0%
	Laboratory	60.0%	20.0%
