

Subject card

Subject name and code	Control in industrial objects, PG_00038081						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	October 2021	Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	4	Language of instruction			Polish		
Semester of study	7	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Control Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Marcin Śliwiński					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		2.0		53.0	100
Subject objectives	The aim of the course is to present selected industrial objects and the control systems correlation with the industrial technology used in them. With a focus on process automation systems, sequential automation systems; Control and automation systems for nuclear power plant and refinery.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K6_W11	The student is able to assess the threat from the outside for the operation of a distributed control and protection system.			[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
	K6_U07	Students will be able to perform a simple model of the process installation part in the simulation software.			[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools		
	K6_K04	The student has basic knowledge about the use of functional safety methodology.			[SK4] Assessment of communication skills, including language correctness [SK2] Assessment of progress of work		

Subject contents	<p>Lecture The scope covers discussing the structure of a modern enterprise on selected examples of industrial objects: object-oriented measurement systems and actuators; basic process control systems and distributed control systems (BPCS; DCS) and alarm or supervisory control and data acquisition systems; safety instrumented systems SIS; safety related systems SRS; emergency shutdown systems ESD; and production management systems with enterprise management elements (SAP ERP; MES). Cooperation of individual systems within the layered control system, from the basic control systems layer (and safety systems) through the master control systems to the management and production planning layer. Classification of objects and automation systems in technical facilities in relation to applied technologies. Functional, technical and organizational characteristics of installation and systems. Marine automation systems, sequential control, power system, wind farms, petrochemical installations and nuclear power plants. Visualization of the interaction between the controlled object and the control unit. An overview of the magnitudes characterized of a controlled object taking into account the technological aspects of the considered objects.</p> <p>Laboratory Computer control, monitoring (SCADA) and protection automation systems used in typical industrial installations. Examples of sequential control systems. Actuators and measuring subsystems in BPCS, DCS, SIS and ESD systems used in industrial installations. Introduction to the modeling of technological processes in typical industrial plants using Flownex SE software.</p>														
Prerequisites and co-requisites															
Assessment methods and criteria	<table border="1"> <thead> <tr> <th data-bbox="453 658 794 689">Subject passing criteria</th> <th data-bbox="799 658 1141 689">Passing threshold</th> <th data-bbox="1145 658 1489 689">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="453 696 794 728">Writing test part 1</td> <td data-bbox="799 696 1141 728">60.0%</td> <td data-bbox="1145 696 1489 728">35.0%</td> </tr> <tr> <td data-bbox="453 734 794 766">Writing test part 2</td> <td data-bbox="799 734 1141 766">60.0%</td> <td data-bbox="1145 734 1489 766">35.0%</td> </tr> <tr> <td data-bbox="453 772 794 833">Assessment of activity on laboratory exercises and home-written reports</td> <td data-bbox="799 772 1141 833">60.0%</td> <td data-bbox="1145 772 1489 833">30.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Writing test part 1	60.0%	35.0%	Writing test part 2	60.0%	35.0%	Assessment of activity on laboratory exercises and home-written reports	60.0%	30.0%
Subject passing criteria	Passing threshold	Percentage of the final grade													
Writing test part 1	60.0%	35.0%													
Writing test part 2	60.0%	35.0%													
Assessment of activity on laboratory exercises and home-written reports	60.0%	30.0%
