

## GDAŃSK UNIVERSITY

## Subject card

| Subject name and code                          | Microprocessor Technologies, PG_00038402   |  |  |   |        |  |  |     |        |
|--|--|--|--|---|--------|--|--|-----|--------|
| Field of study                                 | Electrical Engineering   |  |  |   |        |  |  |     |        |
| Date of commencement of studies                | October 2021   |  | Academic year of<br>realisation of subject   |   |        | 2022/2023  |  |     |        |
| Education level                                | first-cycle studies  |  | Subject group  |   |        | Obligatory subject group in the field of study                             |  |     |        |
|  |  |  |  |   |        | Subject group related to scientific research in the field of study         |  |     |        |
| Mode of study                                  | Part-time studies  |  | Mode of delivery   |   |        | at the university  |  |     |        |
| Year of study                                  | 2  |  | Language of instruction  |   |        | Polish   |  |     |        |
| Semester of study                              | 4  |  | ECTS credits   |   |        | 4.0  |  |     |        |
| Learning profile                               | general academic profile   |  | Assessment form  |   |        | assessment   |  |     |        |
| Conducting unit                                | Zakład Przekształtników i Magazynowania Energii -> Department of Power Electronics and Electrical<br>Machines -> Faculty of Electrical and Control Engineering |  |  |   |        |  |  |     |        |
| Name and surname<br>of lecturer (lecturers)    | Subject supervisor   |  | dr inż. Artur Cichowski  |   |        |  |  |     |        |
|  | Teachers   |  | dr inż. Wojciech Śleszyński  |   |        |  |  |     |        |
|  |  |  | dr inż. Artur Cichowski  |   |        |  |  |     |        |
| Lesson types and methods of instruction        | Lesson type  | Lecture  | Tutorial   | Laboratory  | Projec | t  | Seminar  | SUM |        |
|  | Number of study<br>hours   | 20.0   | 0.0  | 20.0  | 0.0    |  | 0.0  | 40  |        |
|  | E-learning hours included: 0.0   |  |  |   |        |  |  |     |        |
| Learning activity<br>and number of study hours | Learning activity  | Participation in didactic<br>classes included in study<br>plan |  | Participation in<br>consultation hours  |        | Self-study   |  | SUM |        |
|  | Number of study hours  | 40   |  | 4.0   |        | 56.0   |  | 100 |        |
| Subject objectives                             | The aim of the course is to teach students the synthesis and analysis of logic circuits and learn the basics of microcontrollers programming in C.             |  |  |   |        |  |  |     |        |
| Learning outcomes                              | Course outcome   |  | Subject outcome  |   |        | Method of verification   |  |     |        |
|  | K6_K01   |  | The student is aware of the<br>neccessity to<br>extend their knowledge in digital<br>techniques and microprocessors        |   |        | [SK5] Assessment of ability to<br>solve problems that arise in<br>practice |  |     |        |
|  |  |  |  |   |        |  |  |     | K6_U04 |
|  | K6_W07   |  | The student has knowledge of<br>design and analyze<br>digital circuits and<br>programming microprocessors<br>in C language |   |        | [SW3] Assessment of knowledge<br>contained in written work and<br>projects |  |     |        |
|  |  | K6_U01   |  | The student is able to analyze the<br>structure and function of the<br>microprocessor control system.<br>He can use tools for programming<br>and debugging digital circuits in<br>the Quartus |        |  | [SU4] Assessment of ability to use methods and tools |     |        |

| Subject contents   | LECTURE Fundamentals of digital electronics: combinational logic design, sequential logic design, basic medium-scale integration logic circuits (multiplexers/demultiplexers, decoders, adders, memories, registers, counters). Architectures of microprocessors and microcontrollers. Central processing unit, bus, memory, input/output systems. Arithmetic-logic unit, general-purpose registers, program counter, stack / stack pointer. Interrupts. C language programming of microprocessors (based on the ATmega128 microcontroller). Data addressing modes. Fundamentals of microprocessor arithmetics. Interrupt service routines. LABORATORY ACTIVITIES Use of the Quartus II design environment for the design, FPGA implementation and testing of basic logic circuits (gates, flip-flops, registers, counters, memories, and other combinational and sequential circuits). C-language programming of the ATmega128 microcontroller. Use of I/O ports, interrupt service routines, keyboard handling, software implementation of a 24-hour clock, alphanumeric display routines, configuring and use of the embedded A/D converters and PWM channels. Application of the microcontroller in the control of a buck converter. |  |                               |  |  |  |  |
|--|--|--|-------------------------------|--|--|--|--|
| Prerequisites<br>and co-requisites                             |  |  |                               |  |  |  |  |
| Assessment methods   | Subject passing criteria   | Passing threshold  | Percentage of the final grade |  |  |  |  |
| and criteria   | Midterm colloquium   | 60.0%  | 40.0%                         |  |  |  |  |
|  | Practical exercise   | 60.0%  | 60.0%                         |  |  |  |  |
