

Subject card

Subject name and code	Programmable Controllers, PG_00038409						
Field of study	Electrical Engineering						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2023/2024		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Part-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	5		ECTS credits		4.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Department of Power Electronics and Electrical Machines -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Ireneusz Mosoń				
	Teachers		dr inż. Ireneusz Mosoń				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	20.0	0.0	10.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		7.0		63.0	100
Subject objectives	Acquisition by students basic knowledge about programmable controllers - their structure, principle of operation, implementation in control systems - and the skill of programming programmable controllers.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K6_U07		Student selects programmable controllers for specific applications and knows how to design simple control systems with programmable controllers. Student analyses requirements of control tasks and creates control algorithms. Writes, debugs and tests programs of low and middle complexity for control of different control objects. Creates user functions and function blocks. Creates simple visualisation applications.		[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools		
	K6_K01		Student understands how important is to widen permanently his knowledge and skills concerning programmable controllers and their applications. For this purpose he is able to use current technical documentations and publications.		[SK5] Assessment of ability to solve problems that arise in practice		
	K6_W08		Student describes types and structures of programmable controllers. Explains principle of programmable controller operation and principle of execution of the user program. Student describes the role and functions that programmable controllers perform in automatic control systems.		[SW1] Assessment of factual knowledge		

Subject contents	LECTURE Programmable controllers in control systems. Types, structure and principle of operation. Execution of the user program. Process image memory. Hardware characteristics. Interaction with a controlled process. Digital, analog and special input/output circuits. Fundamentals of programming. PN-EN 61131-3 standard. Programming model. Programming languages. Data types and declaration o variables. Addressing. Program organization units - programs, functions and function blocks. Creation of user functions and fuction blocks. Structuring of user programs. Factors of a program quality. Networking programmable controllers. Network structures. Communication interfaces and transmission media. Methods of media access control. Communication protocols (Suconet K, Modbus RTU, Profibus DP, AS-i). Industrial Ethernet (protocols: Modbus TCP, Powerlink, Profinet). Design of programmable controllers based control systems. Selection of a programmable controller depending on an application. Realization of a human - machine interface (HMI). Programming software Easy soft CoDeSys. Creation of visualisation applications. SCADA programs. LABORATORY Programming software Sucosoft S40 (structure; konfiguruing control systems; editing, debugging, testing and documenting programs). Program for a conveyor control - I and II. Conversion functions and arithmetic operators. Counting events and compiler options. Creation of the user function block. Modifying programs and changing variable values in On-line mode. Programming PS4-200 and PS4-150 series controllers in the network (master - active slave).		
Prerequisites and co-requisites	Basic knowledge on electronics and digital technique.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Laboratory	80.0%	50.0%
	Written exam	50.0%	50.0%
Recommended reading	Basic literature	<ol style="list-style-type: none">1. Kasprzyk J.: Programowanie sterowników przemysłowych. WNT, Warszawa, 2006.2. Kwaśniewski J.: Sterowniki PLC w praktyce inżynierskiej. Wyd. BTC, Legionowo, 2008.3. Brok S., Muszyński R., Urbański K., Zawirski K.: Sterowniki programowalne. Wyd. Example issues/ example questions/ tasks being completed	Principle of operation of a programmable controller. What is the proces image memory and what are the advantages and disadvantages of its usage? Programming languages of programmable controllers. What are the differences between functions and function blocks? Network operation of programmable controllers. Writing, debugging and testing simple control programs.		
Work placement	Not applicable
