

Subject card

Subject name and code	Atomic and nuclear physics, PG_00037282						
Field of study	Technical Physics						
Date of commencement of studies	October 2021	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	6	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Zakład Spektroskopii Układów Złożonych -> Instytut Fizyki i Informatyki Stosowanej -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr Brygida Mielewska					
	Teachers	dr inż. Marcin Dampc dr Brygida Mielewska					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	15.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	30	2.0		18.0	50	
Subject objectives	Learning the basics of nuclear physics with particular emphasis on the applications of nuclear physics in nuclear energetics, medicine and other fields of science.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K6_W02	Possesses ordered knowledge regarding the basics of nuclear physics and its applications in energetics, medicine and some other fields of science. [SW1] Assessment of factual knowledge			[SW1] Assessment of factual knowledge		
	K6_U02	[K6_U02] Is able to analyze and solve simple scientific, technical and application problems in the field of nuclear physics. [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment			[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools		

Subject contents	<p>The lecture: 1. Structure and properties of the atomic nucleus: Rutherford experiment, components of the nucleus, the size of atomic nuclei, density of nuclear matter, nuclear forces. 2. The models of atomic nucleus: the drop-, shell-, Fermi gas- and collective model. 3. Spontaneous nuclear transformations: alpha-, beta-, gamma radioactive decay, electron capture. 4. Nuclear reactions: energy balance, cross-section, reaction mechanisms, types and examples. 5. Passage of charged particles through matter: interaction of particles with matter, specific ionization, stopping power, relationship between the energy and range of particles in a medium. 6. The passage of gamma rays through matter: interaction with matter, absorption, scattering, photoelectric effect, Compton effect, pair production, attenuation when passing through matter. 7. Neutrons: sources, interaction with matter, deceleration, spatial distribution and diffusion. 8. Nuclear fission on the example of uranium 235: cross sections, reaction mechanism, reaction energy balance. 9. Chain reaction on the example of uranium 235 nuclear fission: reaction mechanism, necessary conditions, controlling, means of using controlled and uncontrolled reactions. 10. Operation and control of a nuclear fission reactor: basic reactor components, multiplication factor, subcritical, critical and supercritical reactor, reactor equations. 11. Nuclear reactors: fuel, moderator, neutron reflector, control system, coolant, biological shield, types of nuclear reactors, spent fuel management. 12. Thermonuclear reactions: mechanism, necessary conditions, energy balance, controlled thermonuclear fusion and perspectives of its application. 13. Detection of ionizing radiation: ionization chambers, spark chambers, G-M-, Cherenkov-, scintillation counters, semiconductor detectors, cloud chamber. 14. Basic dosimetry units: radioactivity, exposure dose, absorbed, equivalent, effective dose rate, dose limit. 15. Radioactive isotopes and their application in medicine, science and technology.</p> <p>Tutorials: 1. Derivation of the Rutherford's formula. 2. Structure and properties of the atomic nucleus: binding energy per nucleon, energy of nuclear reactions including fusion and fission. 3. Natural radioactivity: decay law, radioactive activity, average life time, the half life. 4. Interaction of radiation with matter: linear and mass attenuation coefficient, half thickness, range of charged particles in the material, Compton- and photoelectric effect, pair production. 5. Nuclear reactions: principles of conservation in reactions, cross-section, reaction efficiency, sample activation in the neutron flux, nuclear fission.</p>											
Prerequisites and co-requisites	1. Basics of relativistic mechanics. 2. Basics of quantum mechanics. 3. Basics of chemistry. 4. Knowledge of physics in the field of university education.											
Assessment methods and criteria	<table border="1" data-bbox="448 871 1487 976"> <thead> <tr> <th data-bbox="448 871 794 902">Subject passing criteria</th> <th data-bbox="794 871 1141 902">Passing threshold</th> <th data-bbox="1141 871 1487 902">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="448 902 794 934">Tutorial credit</td> <td data-bbox="794 902 1141 934">50.0%</td> <td data-bbox="1141 902 1487 934">50.0%</td> </tr> <tr> <td data-bbox="448 934 794 976">Lecture credit</td> <td data-bbox="794 934 1141 976">50.0%</td> <td data-bbox="1141 934 1487 976">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Tutorial credit	50.0%	50.0%	Lecture credit	50.0%	50.0%
