Subject objectives	The aim of this subject is to obtain the student's competence in the range of using the basic methods of linear algebra and analytic geometry. Furthermore, the student should be able to use this knowledge to solve simple theoretical and practical problems that can be found in the field of engineering.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K6_U01	The student recognizes the importance of proper handling basic mathematical apparatus in the context of studies in technical fields.			[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information		
	K6_W02	Student defines the basic concepts of linear algebra Student uses basic notions and formulas of matrix calculus in solving systems of linear equations Student analyses a given problem from analytic geometry			[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation
