

## 关。GDAŃSK UNIVERSITY 多 OF TECHNOLOGY

## Subject card

Subject name and code	, PG_00052097									
Field of study	Nanotechnology									
Date of commencement of studies	October 2021		Academic year of realisation of subject			2023/	2023/2024			
Education level	first-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study				
Mode of study	Full-time studies		Mode of delivery			at the	at the university			
Year of study	3		Language of instruction			Polish	Polish			
Semester of study	6		ECTS credits			4.0				
Learning profile	general academic pro	Assessment form			asses	assessment				
Conducting unit	Department of Manufacturing and Production Engineering -> Faculty of Mechanical Engineering and Ship Technology							ing and Ship		
Name and surname	Subject supervisor	dr hab. inż. St	efan Dzionk							
of lecturer (lecturers)	Teachers		dr inż. Krzysz	dr inż. Krzysztof Doerffer						
			dr inż. Dominika Zakrzewska							
			dr inż. Aleksandra Laska							
			mgr inż. Karo	a-Wszel	ak					
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	ct	Seminar	SUM		
of instruction	Number of study hours	15.0	0.0	15.0	0.0		15.0	45		
	E-learning hours inclu	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity Participation in classes include plan				Self-study SUM		SUM			
	Number of study 45 hours		5.0		50.0		100			
Subject objectives	To familiarize students with the advanced methods of manufacturing construction elements including in the area of micro and nano-techniques									
Learning outcomes	Course outcome		Subject outcome			Method of verification				
	K6_U04		The student practically verifies the machining results using various techniques and parameters. The student is able to assess the quality of the surface using appropriate parameters.			[SU3] Assessment of ability to use knowledge gained from the subject				
	K6_K05		The student prepares studies on the selected machining method, presenting the relationships between the machining results and the parameters used.			[SK4] Assessment of communication skills, including language correctness				
			The student knows advanced manufacturing methods, including for elements in the micro and nano scale. Student defines the basic parameters of the geometrical structure of the surface.			[SW1] Assessment of factual knowledge				
			The student finds data in the literature on advanced machining methods, including micro and nano scales. The student presents the results of his work on technological processes in the nanoscale and explains the details of the issue during the group discussion.			[SU5] Assessment of ability to present the results of task				

Subject contents	LECTURES: Geometric surface structure, aspects of accuracy in manufacturing, basic of advanced machining methods, basic of planning of technological process and computer aided manufacturing including reverse engineering, methods of processing polymer materials, including methods of producing micro- elements. The scope of micro and nano scale processing. tools and processes used in micro and nano-technologies. Additive manufacturing methods including micro and nano-aspect of process. Micro i nano-particles used in additive processing.					
Prerequisites and co-requisites						
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade			
	Raports	60.0%	30.0%			
	Coloquium	60.0%	30.0%			
	Presentation	60.0%	40.0%
