GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Mathematical Analysis, PG_00021503		
Field of study	Mathematics		
Date of commencement of studies	October 2021	Academic year of realisation of subject	2022/2023
Education level	first-cycle studies	Subject group	Obligatory subject group in the field of study
			Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	2	Language of instruction	Polish
Semester of study	3	ECTS credits	10.0
Learning profile	general academic profile	Assessment form	exam
Conducting unit	Department of Nonlinear Analysis and Statistics -> Faculty of Applied Physics and Mathematics		
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Marcin Styborski	
	Teachers	dr inż. Marcin Styborski	
		dr inż. Robert Krawczyk	
		dr inż. Magdalena Chmara	
		mgr inż. Urszula Goławska	

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	60.0	60.0	0.0	0.0	0.0	120
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	120	5.0	125.0	250

Subject objectives	The aim of the course is to familiarize students with the basics (definitions, theorems, methods of calculation and problem-solving methods) of integral calculus of functions of several variables and its applications in field theory, physical and technical issues.

Learning outcomes	Course outcome	Subject outcome	Method of verification
	K6_U06		[SU3] Assessment of ability to use knowledge gained from the subject
	K6_U02		[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information
	K6_U04		[SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools
	K6_W07		[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects
	K6_W04		[SW1] Assessment of factual knowledge

Subject contents	Riemann integral in n-dimensional space. Fubini theorem and iterated integrals. Sets of measure zero and volume zero, the integral over a measurable set. Lebesgue integrability criterion in the sense of Riemann. Normal regions and their properties. Change of variables in multiple integrals . Curvilinear integrals. Green theorem and its applications. Surface integrals. Gauss - Ostrogradsky theorem. Stokes theorem. Elements of field theory: a divergence and rotation of a vector field. Gradient fields. Applications of curvilinear, multiple and surface integrals in physics and engineering. Introduction to the theory of Lebesgue measure and integration.
Prerequisites and co-requisites	Knowledge of previous courses of mathematical analysis (analysis I and analysis II: calculus of functions of several variables, integral calculus of functions of one variable)

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	a completion of the exercises	50.0%	50.0%
	an exam	50.0%	50.0%

Recommended reading	Basic literature	W. Rudin, "*Principles of Mathematical Analysis,*" PWN, Warsaw 2009. G. Fichtencholz, "*Differential and integral calculus",* PWN, Warsaw 1976.
	Supplementary literature	M. Spivak, "*Calculus on manifolds*", PWN, Warsaw 1977.
	eResources addresses	Adresy na platformie eNauczanie: Analiza matematyczna III - Moodle ID: 26895 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=26895

Example issues/ example questions/ tasks being completed	Calculate a double/ triple/ path/ surface integral. Apply the theorem of Green/ Gauss/ Stokes.
Work placement	Not applicable
