

SDAŃSK UNIVERSITY 的 OF TECHNOLOGY

Subject card

Subject name and code	, PG_00044948								
Field of study	Mathematics								
Date of commencement of studies	October 2021		Academic year of realisation of subject			2023/2024			
Education level	first-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the	at the university		
Year of study	3		Language of instruction			Polish			
Semester of study	5		ECTS credits			4.0			
Learning profile	general academic profile		Assessment form			assessment			
Conducting unit	Zakład Równań Różniczkowych i Zastosowań Matematyki -> Instytut Matematyki Stosowanej -> Faculty of Applied Physics and Mathematics								
Name and surname	Subject supervisor		dr inż. Robert Krawczyk						
of lecturer (lecturers)	Teachers	dr inż. Robert Krawczyk							
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory Project		t	Seminar	SUM	
	Number of study hours	30.0	15.0	0.0	15.0		0.0	60	
	E-learning hours inclu	uded: 0.0							
Learning activity and number of study hours	Learning activity	Participation i classes incluc plan		Participation in consultation hours		Self-study		SUM	
	Number of study 60 hours			5.0		35.0		100	
Subject objectives	The use of mathemat related to signal proc engineering.	tical tools in se essing and ma	lected methods thematical moo	of signal analy leling of pheno	ysis; ide mena fr	ntifying om oth	and solving p er fields of sci	problems ience and	
Learning outcomes	Course outcome		Subject outcome			Method of verification			
	K6_U08		The student applies the acquired mathematical knowledge in issues related to signal analysis, data analysis and optimization.			[SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools			
	К6_К03		Students in groups of 2-3 people carry out project tasks related to signal analysis.			[SK4] Assessment of communication skills, including language correctness [SK1] Assessment of group work skills			
	K6_U06		The student applies the acquired mathematical knowledge in signal analysis.			[SU3] Assessment of ability to use knowledge gained from the subject			
	K6_U05		The student analyzes the known methods of signal processing and reconstruction and uses them in various cases; constructs and critically evaluates mathematical models.			[SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject			
	K6_W03		The student learns the basic concepts of system identification, mathematical modeling and sampling theory. The student combines knowledge of mathematics with knowledge of other fields.			[SW1] Assessment of factual knowledge			

Prerequisites and co-requisites Knowledge from courses: Mathematical Analysis, Linear Algebra and Differential equations. Additionally: selected topics of Functional Analysis and Measure Theory/Probability. Assessment methods and criteria Subject passing criteria Passing letture classes (Quiz on eNauczanie and Final Test) Passing letture classes (Quiz on eNauczanie and Final Test) Point Test Point Test 90.0% 40.0% Project 50.0% 30.0% 30.0% Test in practical exercises 50.0% 30.0% Recommended reading Basic literature Y. C. Etdar, Sampling theory: Beyond Bandimited Systems, Cambridge University Press, 2015 Recommended reading Basic literature Y. C. Etdar, Sampling theory: Beyond Bandimited Systems, Cambridge University Press, 2015 S. Stoiriski, Funkcje prawie-okresowe, Wydawnictwo Naukowe UAM, Poznani, 2008 P. Wojtaszczyk, Teoria falek. Podstawy matematyczne, Wydawnictwo Naukowe PWN, Warszawa, 2000 J. Andres, A.M. Bersani, R.F. Grande, Hierarchy of atmost-periodic function spaces, Rendiconti di Matematica, Serie VII Volume 26, Roma (2006), 121-188 Supplementary literature G.Kaiser, A Friendly Guide to Wavelets, Birkhauser, Boston, 1995 R. Isermann, M. Münchhof, Identifications of Dynamic Systems. An Introduction with Applications. Springer-Verlag Berlin Heidelberg 2011. A. Bogges, J. Narcowich, A first course in wavelets with Fourier analysis. Upper Saddle River, NJ	Subject contents	The concept of mathematical model, signal and identification. Continuous- and discrete-time Fourier transform (CTFT and DTFT), frequency spectrum of the signal. LTI and impulse response systems. The concepts of sampling, quantizing and filtering of the signal. The sampling process and the relation between CTFT of a continuous signal and DTFT of its sampled signal. Shannon-Nyquist sampling theorem in signal reconstruction. Bohr almost periodic functions: definition and basic properties. Generalized trigonometric polynomial and Fourier series. Continuous almost periodic signals as sums of periodic signals. Wavelet transform, Haar wavelets.						
and criteria Passing lecture classes (Quiz on eNauczanie and Final Test) 50.0% 40.0% Project 50.0% 30.0% 30.0% Recommended reading Basic literature Y. C.
