

Subject card

Subject name and code	Structural Research of Materials, PG_00039768						
Field of study	Materials Engineering, Materials Engineering, Materials Engineering						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2022/2023		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	4		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit							
Name and surname of lecturer (lecturers)	Subject supervisor						
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		40.0	75
Subject objectives	The purpose of the course is to familiarize students with methods of studying the microstructure of engineering construction materials, mainly by microscopic methods.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K6_W06		The student knows the structure of optical and electron microscopes and how to prepare material samples to determine their microstructure using various microscopes.		[SW1] Assessment of factual knowledge		
	K6_K01		The student understands the relationship between the microstructure of engineering materials and their properties and is aware of what methods can be used to determine the microstructure of materials.		[SK5] Assessment of ability to solve problems that arise in practice		
	K6_U01		The student is able to select an appropriate method of preparing a material sample so as to determine its microstructure.		[SU4] Assessment of ability to use methods and tools		
	K6_W04		The student knows the construction of optical and electron microscopes and how the microstructural structure of engineering materials can be determined with these tools.		[SW1] Assessment of factual knowledge		
	K6_U02		The student is able to use an optical microscope to select an appropriate method for studying the microstructure of engineering materials		[SU5] Assessment of ability to present the results of task		
Subject contents	Construction and principle of operation of an optical microscope and various electron microscopes. Resolution capacity, total and useful magnification of the microscope, objective aperture and how to select an eyepiece for selected objectives. Methods of obtaining contrast in light and electron microscopy. Preparation of specimens for examination on the light and electron microscope.						
Prerequisites and co-requisites	brak						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	passing all the laboratory classes	60.0%	50.0%
	exam	60.0%	50.0%
Recommended reading	Basic literature	Mikroskopia optyczna Maksymilian Pluta Transmission Electron Microscopy: A Textbook for Materials Science: by C. Barry Carter David B. Williams Scanning Electron Microscopy and X-Ray Microanalysis. A Text for Biologists, Materials Scientists, and Geologists: Goldstein, J., Newbury, D.E., Echlin, P., Joy, D.C., Romig Jr., A.D., Lyman, C.E., Fiori, C., Lifshin, E. Imaging Optics.
