| Conducting unit                             | Institute of Mechanics and Machine Design -> Faculty of Mechanical Engineering and Ship Technology           |  |   |                                     |  |            |     |
| Name and surname of lecturer (lecturers)    | Subject supervisor   |  | mgr inż. Katarzyna Pytka                |                                     |  |            |     |
|   | Teachers   |  | mgr inż. Katarzyna Pytka                |                                     |  |            |     |
| Lesson types and methods of instruction     | Lesson type  | Lecture  | Tutorial                                | Laboratory                          | Project  | Seminar    | SUM |
|   | Number of study hours  | 0.0  | 0.0                                     | 15.0                                | 0.0  | 0.0        | 15  |
|   | E-learning hours included: 0.0   |  |   |                                     |  |            |     |
| Learning activity and number of study hours | Learning activity  | Participation in didactic classes included in study plan |   | Participation in consultation hours |  | Self-study | SUM |
|   | Number of study hours  | 15   |   | 1.0                                 |  | 9.0        | 25  |
| Subject objectives                          | The purpose of the course is to familiarize students with the basic mechanical methods of materials testing. |  |   |                                     |  |            |     |

|  |  |  |   |
|--|--|--|---|
| Learning outcomes  | Course outcome   | Subject outcome  | Method of verification  |
|  | K6_W06   | The student has the ability to estimate the strength properties and technological properties of materials (static tensile/ compression/torsion test of metals), has the ability to determine the behavior of a material subjected to dynamic loading, has the ability to determine the longitudinal modulus of elasticity, learns the methods of testing the hardness of metals (Brinell, Rockwell, Vickers, Shore and Poldi hammer) and acquires the ability to estimate the deflection of a beam | [SW2] Assessment of knowledge contained in presentation<br>[SW3] Assessment of knowledge contained in written work and projects                         |
|  | K6_W05   | The student has the ability to analyze the basic issues related to the strength of materials, in terms of theory and solving simple tasks and practical problems.  | [SW1] Assessment of factual knowledge   |
|  | K6_U01   | The student is familiar with the testing machines used for each test and the types of specimens used, and has the ability to properly measure the specimens used for testing.  | [SU4] Assessment of ability to use methods and tools  |
|  | K6_U08   | The student has the ability to prepare a report on the research carried out in class.  | [SU2] Assessment of ability to analyse information<br>[SU1] Assessment of task fulfilment<br>[SU5] Assessment of ability to present the results of task |
| Subject contents   | Testing the hardness of metals. Tension/compression/torsion of metals.   |  |   |
| Prerequisites and co-requisites                          | The student should have knowledge of mathematics, mechanics and basic knowledge of general properties of metals.             |  |   |
| Assessment methods and criteria                          | Subject passing criteria   | Passing threshold  | Percentage of the final grade   |
|  |  | 56.0%  | 50.0%   |
|  |  | 56.0%  | 50.0%   |
