GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Mathematics II, PG_00049096		
Field of study	Materials Engineering, Materials Engineering, Materials Engineering		
Date of commencement of studies	October 2021	Academic year of realisation of subject	2021/2022
Education level	first-cycle studies	Subject group	Obligatory subject group in the field of study
Mode of study	Full-time studies	Mode of delivery	blended-learning
Year of study	1	Language of instruction	Polish
Semester of study	1	ECTS credits	7.0
Learning profile	general academic profile	Assessment form	exam
Conducting unit	Mathematics Center -> Vice-Rector for Education		
Name and surname of lecturer (lecturers)	Subject supervisor	dr Anna Niewulis	
	Teachers	mgr Katarzyna Kiepiela dr Anna Niewulis	

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	30.0	45.0	0.0	0.0	0.0	75

E-learning hours included: 30.0

Adresy na platformie eNauczanie:
IM sem.1 - Matematyka II - 2021/2022 (A.Niewulis) - Moodle ID: 13688 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=13688

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	75	10.0	90.0	175

Subject objectives

Students obtain competence in the range of using methods of mathematical analysis and linear algebra and knowledge how to solve simple problems that can be found in the field of engineering.

Learning outcomes

Course outcome	Subject outcome	Method of verification
K6_U05	Student understands the need of lifelong learning. Student is able to inspire others and organize their learning process.	[SU3] Assessment of ability to use knowledge gained from the subject
K6_K01	Student recognizes the importance of self-expanding knowledge and takes the challenge of working with a group to solve a problem.	[SK5] Assessment of ability to solve problems that arise in practice
K6_W01	Student uses methods of mathematical description of phenomena in the physical / mechanical / chemical processes.	[SW3] Assessment of knowledge contained in written work and projects

Subject contents	Functions of one variable and their properties: Power functions – solving power and polynomial equations and inequalities. Rational functions – solving rational equations and inequalities. Exponential function – properties and graphs, solving exponential equations and inequalities. Logarithmic functions – properties and graphs, solving logarithmic equations and inequalities. Trigonometric and cyclometric functions – properties and graphs, solving trigonometric equations and inequalities. Limits and continuity: Infinite sequences. Fundamental definitions of a limit of a sequence, convergence and divergence, limit theorems. Applications to solving equation. Differential calculus of one variable functions and its applications: Definition of a first derivative and differential. Roll's and Lagrange's theorems. Higher derivatives and differentials. Monotonicity and local extrema. Convexity, concavity and inflexion points of a function. De l'Hospital's Thorem. Asymptotes. Applying differential calculus to studying the properties of one variable functions. Inegral calculus of one variable functions – antiderivatives: The process of finding antiderivatives and integration formulas – the substitution method of integration and integration by parts. Integration of rational, trigonometric and irrational functions. Definite integrals in Riemann's sense: Newton-Leibniz Thorem. Integration formulas, the substitution method of integration and integration by parts for definite integrals. Applications of integral calculus in computing areas of plane figures, lengths of arcs, volumes of solids of revolution.
Prerequisites and co-requisites	

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Colloquium	50.0%	40.0%
Exam	50.0%	60.0%

Example issues/ example questions/ tasks being completed	1. Find the domain and the set of values of the function . Determine the inverse function of f. 2. Find the derivative of the function 3. Find local extremes and intervals of monotonicity of the following function 4. Determine indefinite integrals of the following functions 5. Give three applications of the definite integral with appropriate rules. 6. Find the volume of a solid obtained by rotating around the axis OX the graph of the function 7. Solve the logarithmic equation (exponential) 8. Find the area between the two curves
