

Subject card

Subject name and code	Physical Methods of Materials Investigation II, PG_00039814						
Field of study	Materials Engineering, Materials Engineering, Materials Engineering						
Date of commencement of studies	October 2021	Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	4	Language of instruction			Polish polish		
Semester of study	7	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Solid State Physics -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Marek Chmielewski					
	Teachers	dr hab. inż. Leszek Piotrowski dr inż. Marek Chmielewski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		2.0		3.0	50
Subject objectives	The aim of the course is to prepare the student for experimental work in the field of multi-path testing of materials using non-destructive diagnostic techniques used to study the physical properties of matter, structures of the matter and to defects detections procedures.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	K6_U08	The student creates reports from his/her work in a manner appropriate to scientific documentation, is able to control the completeness and sequence of the theses presented in the study, has the ability to make logical inferences and is able to record this information in a clear, stylistically correct manner.	[SU5] Assessment of ability to present the results of task
	K6_K01	The student learns the importance of the correctness of the sentences of the world of science, can properly communicate your skills, being able to objectively convey information about their role in society, he understands the importance of science in daily life	[SK2] Assessment of progress of work
	K6_W06	The student will know the capabilities of different measurement techniques, discovers and suggests the possibility of their effective use in areas other than those performed during the lab.	[SW3] Assessment of knowledge contained in written work and projects
	K6_W02	The student will know: the physical basis of the description of the magnetic properties with a particular emphasis on the properties of hysteresis, definitions and description of the mechanical waves propagating in solid materials, will know influence of the permanent or changed in time magnetic field on the conductive materials.	[SW1] Assessment of factual knowledge
K6_U02	Implementation of laboratory tasks that require in-depth knowledge on the use and operation of modern measuring and recording systems. Acquisition of knowledge about the operation of programmable arbitrary generators, digital oscilloscopes, oscilloscope measurement cards, programmable measurement cards.	[SU1] Assessment of task fulfilment	
Subject contents	The student will know non-destructive methods based on measurement of physical quantities such as the value of induction and magnetic field, the intensity of Barkhausen noise effect, magnetostrictive and ultrasonic wave pulses for materials parameters describing. Students will know the methodology of the study of thin coatings, he will testing methods of flaw detection of materials based on the measurement of electrical resistivity, magnetic properties, acoustic properties and internal friction. Lecture: During the lecture will presents subjects listed below Method of defectoscopy: Radiological method Endoscopes method Magnetic field leakage method Ultrasound method Eddy Current Method Acoustic emission method Other methods Material investigation methods: Radiological method of material investigation Ultrasound method Electromagnetic method Mechanical spectroscopy method Hardness measurement method Stress determination methods Radiological method of stress determination Neutronographical method of stress evaluation Ultrasound method Magnetic method, Barkhausen effect method		
Prerequisites and co-requisites	Not required		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Laboratory	100.0%	60.0%
	Lecture	50.0%	40.0%

	Supplementary literature	No recommendations	
	eResources addresses	Adresy na platformie eNauczanie: Fizyczne metody badań materiałów II - Moodle ID: 42214 https://enauzanie.pg.edu.pl/moodle/course/view.php?id=42214	

Example issues/ example questions/ tasks being completed	Detection and registration of ultrasound pulses. Measurement of the magnetic field leakage and its use in the defect detection. Barkhausen effect used in the field to determine the size for elastic deformation.
Work placement	Not applicable

Document generated electronically. Does not require a seal or signature.
