

## 关。GDAŃSK UNIVERSITY 创 OF TECHNOLOGY

## Subject card

Subject name and code	Basics of Materials Engineering I, PG_00039782								
Field of study	Materials Engineering, Materials Engineering, Materials Engineering								
Date of commencement of studies	October 2021		Academic year of realisation of subject			2021/2022			
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study			
						Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	1		Language of instruction			Polish			
Semester of study	2		ECTS credits		3.0				
Learning profile	general academic profile		Assessmer	ssment form		assessment			
Conducting unit	Department of Materials Engineering and Bonding -> Faculty of Mechanical Engineering and Ship Technology								
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Andrzej Zieliński						
	Teachers		prof. dr hab. inż. Andrzej Zieliński						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
	Number of study hours	30.0	0.0	0.0	0.0		0.0	30	
	E-learning hours included: 0.0								
	Adresy na platformie eNauczanie:								
Learning activity and number of study hours	Learning activity	Participation in classes include plan	n didactic led in study	actic Participation in consultation hours		Self-study		SUM	
	Number of study hours	30		10.0		35.0		75	
Subject objectives	The aim of the course is a gaining of fundamental knowledge on kinds of materials, desgin and choice of materials, fabrication of materials, treatment of materials. Another aim is an achievement of skills to solve, based on gained knowledge, simple engineering tasks in area of materials engineering.								

Learning outcomes	Course outcome	Subject outcome	Method of verification				
	К6_К01	The student understands the need for lifelong learning and the impact of knowledge and the acquisition of appropriate competences. The student can predict the impact knowledge and skills in the area knowledge about materials on your own future professional life. The student can assess their deficiencies and define measures to eliminate them. The student knows how to use engineering logic related to the tasks performed.	[SK3] Assessment of ability to organize work [SK4] Assessment of communication skills, including language correctness [SK5] Assessment of ability to solve problems that arise in practice [SK2] Assessment of progress of work				
	K6_U01	The student is able to analyze problems, simulate phenomena and processes, as well as use devices in the field of materials science and materials engineering. In particular, the student can find and interpret relationships between structure, chemical bonds and properties and the use of materials.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools				
	K6_W03	The student has a basic knowledge of the construction of materials, strength of materials, testing methods, heat and plastic treatment, types of materials. He/ she can predict phenomena occurring in materials under the influence of external factors.	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects				
Subject contents	Genesis and tasks of materials science and engineering. Development tendency of materials science. Classification and general characteristics of materials. Chemical bonding. Principles of crystallography. Structure of metals, ceramics, polymers. Point and linear defects of crystalline structure. Diffusion: equations and mechanisms. Grain boundaries. Monocrystals and polycrystals. The influence of crystalline structure defects on mechanical properties of metals. Structure of metal alloys. Solid solutions. Intermetallic compounds. Thermodynamic equilibrium. Gibbs phase rule. Binary and ternary phase diagrams. Phase transformations. Examinations of material structure. Material properties. Examinations of mechanical properties. Crystallization from liquid phase: nucleation, growth of crystals, kinetics of crystallization. Technical aspects of crystallization. Plastic deformation of metals. Mechanisms of plastic deformation. Transformations in metals caused by cold-work. Recovery and recrystallization. Technical aspects of plastic deformation and recystallization. Phase diagram iron-carbon and iron-cementite. Iron-carbon alloys: carbon steels, carbon cast steels and cast irons.						
Prerequisites and co-requisites	No requirements.						
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade				
and criteria	Written test during and at the end of semester	50.0%	100.0%				
Recommended reading	Basic literature	<ol> <li>Blicharski M.: Inżynieria materiałowa. Stal. WNT, Warszawa 2004. 2.</li> <li>Blicharski M.: Wstęp do inżynierii materiałowej.
