

## GDAŃSK UNIVERSITY

## Subject card

| Subject name and code                       | Basic of Materials Engineering II, PG_00039791   |   |  |               |            |  |         |     |  |
|---|--|---|--|---------------|------------|--|---------|-----|--|
| Field of study                              | Materials Engineering, Materials Engineering, Materials Engineering  |   |  |               |            |  |         |     |  |
| Date of commencement of studies             | October 2021   |   | Academic year of realisation of subject  |               |            | 2022/2023  |         |     |  |
| Education level                             | first-cycle studies  |   | Subject group  |               |            | Obligatory subject group in the<br>field of study<br>Subject group related to scientific<br>research in the field of study |         |     |  |
| Mode of study                               | Full-time studies  |   | Mode of delivery   |               |            | at the university  |         |     |  |
| Year of study                               | 2  |   | Language of instruction  |               |            | Polish   |         |     |  |
| Semester of study                           | 3  |   | ECTS credits   |               |            | 6.0  |         |     |  |
| Learning profile                            | general academic profile   |   | Assessment form  |               |            | exam   |         |     |  |
| Conducting unit                             | Department of Materi<br>Technology   | g and Bonding -> Faculty of Mechanical Engineering and Ship |  |               |            |  |         |     |  |
| Name and surname of lecturer (lecturers)    | Subject supervisor   |   | dr inż. Grzegorz Gajowiec  |               |            |  |         |     |  |
|   | Teachers   |   | dr inż. Grzegorz Gajowiec  |               |            |  |         |     |  |
|   |  | dr inż. Łukasz Pawłowski                                    |  |               |            |  |         |     |  |
| Lesson types and methods of instruction     | Lesson type  | Lecture   | Tutorial   | Laboratory    | Projec     | t  | Seminar | SUM |  |
|   | Number of study hours  | 15.0  | 0.0  | 45.0          | 0.0        |  | 0.0     | 60  |  |
|   | E-learning hours included: 0.0   |   |  |               |            |  |         |     |  |
| Learning activity and number of study hours | Learning activity Participation in<br>classes include<br>plan  |   |  |               | Self-study |  | SUM     |     |  |
|   | Number of study 60<br>hours  |   | 15.0   |               | 75.0       |  | 150     |     |  |
| Subject objectives                          | To acquaint students with issues related to the features and application of iron alloys and their heat and thermo-chemical treatment.  |   |  |               |            |  |         |     |  |
| Learning outcomes                           | Course outcome   |   | Subject outcome  |               |            | Method of verification   |         |     |  |
|   | K6_U01   |   | Can assess the microstructures<br>and make the necessary<br>calculations.  |               |            | [SU3] Assessment of ability to<br>use knowledge gained from the<br>subject   |         |     |  |
|   | K6_K01   |   | He is aware of the difficulties<br>involved in analyzing<br>microstructures.   |               |            | [SK2] Assessment of progress of work   |         |     |  |
|   | K6_W03   |   | Based on the observation of the<br>microstructure, the student can<br>recognize the type of steel and the<br>type of processing it has been<br>subjected to. |               |            | [SW1] Assessment of factual knowledge  |         |     |  |
|   | K6_W06   |   | He can prepare metallographic specimens and assess their microstructure  |               |            | [SW1] Assessment of factual knowledge  |         |     |  |
| Subject contents                            | Iron-carbon alloys - types. Characteristics and application of white and graphite cast irons. Classification, marking and application of non-alloy and alloy steels. Heat treatment of steels - annealing, hardening and tempering. Issues of hardenability and its importance. The influence of alloying elements on the properties of steel. Characteristics of structural, corrosion-resistant and tool steel alloys. Heat and chemical treatment of steel. |   |  |               |            |  |         |     |  |
| Prerequisites<br>and co-requisites          | Completion of the Fu   | ndamentals of   | Materials Scier  | nce course I. |            |  |         |     |  |
| Assessment methods                          | Subject passing criteria   |   | Passing threshold  |               |            | Percentage of the final grade  |         |     |  |
| and criteria                                | credit laboratory and written exam   |   | 75.0%  |               |            | 100.0%   |         |     |  |

| Example issues/<br>example questions/<br>tasks being completed | https://enauczanie.pg.edu.pl/moodle/course/view.php?id=26338         [1]. Definition of steel and classification criteria.         [2] How does the eutectoid transformation affect the grain size in steel?         [3] How alloying additives affect:         - steel structures         - hardenability of steel         - steel resistance to corrosion?         [4] Definition of cast iron. How does the form of coal occurrence affect the properties of cast irons?         [5] What is cast iron, according to what criteria can it be classified.         [6] What are ductile cast irons characterized by and where are they used.         [7]. What is heat treatment and what are its basic types.         [8] What is the hardenability of steel, what factors and how do they affect it, and what is its practical significance?         [9] What structures are obtained after hardening the steel. What are they characterized by?         [10] Explain the terms:         -critical diameter D50 and D90. |  |  |  |  |  |
