

Subject card

| Subject name and code | Biologically induced corrosion, PG_00039748 | | | | | | | | | |
|---|--|---|---|-------------------------------------|------------------------|---|----------|--------------|--|--|
| Field of study | Materials Engineering, Materials Engineering, Materials Engineering | | | | | | | | | |
| Date of commencement of | October 2021 | Academic year of | | | 2024/2025 | | | | | |
| studies | | | realisation of subject | | | 2024/2020 | | | | |
| Education level | first-cycle studies | | Subject group | | Optional subject group | | | | | |
| | | | , | | | Subject group related to scientific research in the field of study | | | | |
| Mode of study | Full-time studies | | Mode of delivery | | | at the university | | | | |
| Year of study | 4 | | Language of instruction | | | Polish | | | | |
| Semester of study | 7 | | ECTS credits | | | 1.0 | | | | |
| Learning profile | general academic profile | | Assessment form | | | assessment | | | | |
| Conducting unit | Department of Chem | istry, Technolo | gy and Biochemistry of Food -> Faculty of Chemistry | | | | | | | |
| Name and surname | Subject supervisor | | dr inż. Paweł I | inż. Paweł Filipkowski | | | | | | |
| of lecturer (lecturers) | Teachers | | | | | | | | | |
| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | ry Project | | Seminar | SUM | | |
| | Number of study hours | 15.0 | 0.0 | 0.0 | 0.0 | | 0.0 | 15 | | |
| | E-learning hours incli | uded: 0.0 | | | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation in classes include plan | | Participation in consultation hours | | Self-study | | SUM | | |
| | Number of study hours | 15 | 1.0 | | | 9.0 | | 25 | | |
| Subject objectives | The aim of the lecture is familiarizing of students with machanisms of corrosion inducing by microorganisms. | | | | | | | roorganisms. | | |
| Learning outcomes | Course outcome Subject outcome Method of | | | | | Method of veri | fication | | | |
| | K6_U06 | | Is able to integrate the information obtained on microorganisms causing biocorrosion and draw conclusions, formulate and justify opinions based on, for example, microscopic observations of surfaces or cells | | | [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment | | | | |
| | K6_K01 | | understands the need to improve professional and personal competences; is aware of his/her own limitations and knows when to turn to experts, is able to define priorities appropriately, e.g. to combat biocorrosion phenomena | | | [SK4] Assessment of communication skills, including language correctness [SK3] Assessment of ability to organize work | | | | |
| | K6_W07 has detailed knowledge relative selected issues related to materials subject to biocorro | | | | | [SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge | | | | |
| Subject contents | General characteristic of microrganisms occurring in natural environment, particularly the microrganisms in the soil and water. Nutrition requirements and growth. Effect of environmental factors on microrganisms temperature, pH, oxidation-reduction potential, water activity, hydrostatic pressure. Microrganisms and environment: ecosystems, kinds of interactions among microorganisms. Corrosion induced by microorganisms: - prokaryotic: sulphate reducing bacteria; sulphur oxidizing bacteria and bacteria oxidizing reduced sulphate compounds; iron bacteria; biofilms producing bacteria, - eukaryotic: fungi, algae. Ways of corrosion inducing by microrganisms; modification of the enmviroment on the metal/solution interface by products of microbial metabolism, biofilm formation. Characteristics of biofilm and biofouling. Microbial inhibition of corrosion: mechanisms (neutralization effects of corrosive substances, forming protective films on a metal surface, decreasing the medium corrosiveness. General characteristic of the methods of detection, identification and monitoring of biocorrosion: control and analysis of biocorrosion, monitoring on line, chemical and physical analysis of water, chemical analysis of biofouling, detection and quantification of microorganisms. Prevention of biocorrosion: mechanical and chemical cleaning, biocides, corrosion inhibitors. | | | | | | | | | |
| Prerequisites and co-requisites | General biological knowledge. Knowledge from the courses of Basis of Corrosion and Corrosion Protection Technologies | | | | | | | | | |
