|---|--|---|-------------------------------------|------------|---------------------------------------|--|-----|
| Subject name and code | Modelling and Simulation Languages , PG_00047822 | | | | | | |
| Field of study | Biomedical Engineering, Biomedical Engineering, Biomedical Engineering | | | | | | |
| Date of commencement of studies | October 2021 | Academic year of realisation of subject | | | | 2023/2024 | |
| Education level | first-cycle studies | Subject group | | | | Optional subject group Subject group related to scientific research in the field of study | |
| Mode of study | Full-time studies | Mode of delivery | | | | at the university | |
| Year of study | 3 | Language of instruction | | | | Polish | |
| Semester of study | 5 | ECTS credits | | | | 5.0 | |
| Learning profile | general academic profile | Assessment form | | | | exam | |
| Conducting unit | Department of Microelectronic Systems -> Faculty of Electronics, Telecommunications and Informatics | | | | | | |
| Name and surname of lecturer (lecturers) | Subject supervisor | dr hab. inż. Bogdan Pankiewicz | | | | | |
| | Teachers | dr hab. inż. Bogdan Pankiewicz | | | | | |
| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | Project | Seminar | SUM |
| | Number of study hours | 30.0 | 0.0 | 30.0 | 0.0 | 0.0 | 60 |
| | E-learning hours included: 0.0 | | | | | | |
| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan | Participation in consultation hours | | Self-study | SUM | |
| | Number of study hours | 60 | 5.0 | | 60.0 | 125 | |
| Subject objectives | The aim of the subject is learning of modeling and simulation of electronic circuits using PSPICE and HDL languages such as Verilog and VHDL. | | | | | | |
| Learning outcomes | Course outcome | Subject outcome | | | Method of verification | | |
| | [K6_U04] can apply knowledge of programming methods and techniques as well as select and apply appropriate programming methods and tools in computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study | Student can perform simulation using the PSPICE simulator. Student is able to design simple digital systems using Verilog and VHDL. The student is able to implement simple digital systems using FPGAs. | | | [SU1] Assessment of task fulfilment | | |
| | [K6_W04] knows and understands, to an advanced extent, the principles, methods and techniques of programming and the principles of computer software development or programming devices or controllers using microprocessors or programmable elements or systems specific to the field of study, and organisation of systems using computers or such devices | Student knows the syntax of PSPICE files, types of possible simulations, ways of describing analog and digital circuits, and how to perform simulations of electronic circuits. Student knows HDL languages: Verilog and VHDL. Student is able to perform a description of the digital system and its simulation. | | | [SW1] Assessment of factual knowledge | | |
| Subject contents | 1. Introduction to and applications of HDL languages. Genesis of Verilog language. 2. Abstraction levels (Verilog). 3. Design methodologies. Simple example. 4. Syntax of Verilog. 5. Data types. 6. System tasks and compilers directives. 7. Modules and ports. 8. Modelling at gate level. 9. Delays in gates. 10. Modelling at register level. 11. Concurrent assignment. 12. Expressions and operators. 13. Modeling at behavioral level. 14. Functions and tasks. 15. Modelling techniques. 16. Verilog 2001 changes in the standard. 17. Genesis of VHDL language. 18. Syntax and data types. 19. Entities and their architectures. 20. Instantiation of components. 21. Concurrent assignments, simple and conditional. 22. Delays, concurrent and time operations. 23. Processes. 24. Conditional commands and loops. 25. Delays with wait keyword. 26. Functions and procedures. 27. Libraries and packages. 28. IEEE library. 29. Synthesis of state machines. 30. Testing the design. 31. Other HDL languages. | | | | | | |

| | | | |
