# GDAŃSK UNIVERSITY OF TECHNOLOGY

## Subject card

| | |
|---|---|
| Subject name and code | Strength of Materials II, PG_00040052 |
| Field of study | Mechanical Engineering |

| | | | |
|---|---|---|---|
| Date of commencement of studies | October 2021 | Academic year of realisation of subject | 2022/2023 |
| Education level | first-cycle studies | Subject group | Obligatory subject group in the field of study<br>Subject group related to scientific research in the field of study |
| Mode of study | Part-time studies | Mode of delivery | blended-learning |
| Year of study | 2 | Language of instruction | Polish |
| Semester of study | 4 | ECTS credits | 6.0 |
| Learning profile | general academic profile | Assessment form | exam |

| | |
|---|---|
| Conducting unit | Institute of Mechanics and Machine Design -> Faculty of Mechanical Engineering and Ship Technology |

| Name and surname of lecturer (lecturers) | Subject supervisor | dr hab. inż. Mirosław Gerigk |
|---|---|---|
| | Teachers | mgr inż. Grzegorz Banaszek<br><br>dr hab. inż. Mirosław Gerigk |

| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | Project | Seminar | SUM |
|---|---|---|---|---|---|---|---|
| | Number of study hours | 15.0 | 15.0 | 8.0 | 0.0 | 0.0 | 38 |
| | E-learning hours included: 15.0 | | | | | | |

| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan | Participation in consultation hours | Self-study | SUM |
|---|---|---|---|---|---|
| | Number of study hours | 38 | 5.0 | 107.0 | 150 |

| Subject objectives | The aim of the lectures is to deliver to the students the knowledge and abilities to solve the complex problems concerning the bars, shells, 3D structures, mechanics of cracking and fatique strength, vibrations of bars and selected problems of finite element method. |
|---|---|

| Learning outcomes | Course outcome | Subject outcome | Method of verification |
|---|---|---|---|
| | [K6_U01] is able to acquire information from specialized literary sources, databases and other resources, essential for solving engineering tasks; is able to compile the obtained information pieces and to interpret them, additionally is able to form conclusions and present justified opinion | A student may consider the complex problems concerning the strength of materials as the complex tension, compresion, torsion and bending problems. A student is able to consider the complex problems of strength of materials associated with the thin-walled and thick shells. | |
| | [K6_U06] is able to use mathematical and physical models for analysing the processes and phenomena occurring in mechanical devices within the range of material strength, thermodynamics and fluid mechanics | A student is able to solve hiper-static and non hiper-static problems of strength of the bars, beams and structures of a elsto-plastic character. A student is able to investigate the mechanical characteristics of the structures. A student is able to solve the 2-D and 3-D finite element strength of materials problems. A student is able to solve the strength of materials problems in different fields of technology. | [SU2] Assessment of ability to analyse information<br>[SU5] Assessment of ability to present the results of task<br>[SU4] Assessment of ability to use methods and tools<br>[SU1] Assessment of task fulfilment<br>[SU3] Assessment of ability to use knowledge gained from the subject |
| | [K6_W05] possesses an organized and theoretically grounded knowledge within the range of strength analysis of basic mechanical constructions including stress and relaxation conditions, energetic methods, strength hypotheses | A student is able to consider the phenomena of the loads impact on the elsto-plastic fixed body for the complex state of strength of structure. A student is able to assess the complex state of loads and stress. A student is able to assess the complex states of loads, stress and deformation using the strength hypotheses and enery-based methods. | [SW2] Assessment of knowledge contained in presentation<br>[SW1] Assessment of factual knowledge<br>[SW3] Assessment of knowledge contained in written work and projects |

| Subject contents | Selected problems of combined stress including the oblique bar bending, bar torsion together with bending and tension (compression), bending and tension (compression) of curved bar. Stress of thin-walled bars of the opened and closed cross section. Analysis of hiper-static and non hiper-static structures using the force method and three-momentum method. Plates and shells: bending of thin-walled plates, thin-walled shells, membrane theory of shells, bending theory of of thin-walled cylindrical shells. Cylindrical and sphere tanks. Stress of tanks under the pressure. Thick-walled cylindrical shells. Stress in shells uder the pressure. Thick-walled pipes. Stress in interference joints. Cracking and fatique stress. Vibrations of elasto-plastic structures. Finite elemnt method FEM. |
|---|---|
| Prerequisites and co-requisites | A student is able to solve the ordinary and partial differencial eguations. A student has the selected knowledge in maths: linear algebra, analitical geometry, trygonometry, differencial and integral calculus. A student has the selected knowledge in general mechanics: statics, kinetics, dynamics. A student has the knowledge in strength of materials I (3rd semester). |

| Assessment methods and criteria | Subject passing criteria | Passing threshold | Percentage of the final grade |
|---|---|---|---|
| | half term and final egzam | 56.0% | 100.0% |
