

## Subject card

Subject name and code	Manufacturing Engineering, PG_00040059						
Field of study	Mechanical Engineering						
Date of commencement of studies	October 2021		Academic year of realisation of subject			2022/2023	
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Part-time studies		Mode of delivery			at the university	
Year of study	2		Language of instruction			Polish	
Semester of study	4		ECTS credits			4.0	
Learning profile	general academic profile		Assessment form			exam	
Conducting unit	Department of Manufacturing and Production Engineering -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Piotr Sender				
	Teachers		dr inż. Dawid Zieliński dr inż. Piotr Sender				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	8.0	8.0	0.0	31
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	31		4.0		65.0	100
Subject objectives	Student knows machine technology						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K6_W11] possesses knowledge on design, technology and manufacturing of machine parts, metrology, and quality control; knows and understands methods of measuring and calculating basic values describing the operation of mechanical systems, knows basic calculating methods applied to analyse the results of experiments	Analyzes technological operations in terms of: execution time, accuracy, processing parameters, measurements in machine technology	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects
	[K6_U09] is able to plan the manufacturing, assembly and quality control processes of typical constructions and mechanical devices, estimating their costs	Describes the principles of design operations and processes technological typical parts machines taking into account the cost of production	[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task
	[K6_U08] is able to design a technological manufacturing process for typical elements of machines or devices, using analytical and numerical calculating tools	Describes the principles of design operations and processes technological typical parts machines	[SU4] Assessment of ability to use methods and tools
	[K6_U04] is able to perform a critical analysis of the existing technical solutions, present the specification of the technology of manufacturing basic construction elements of machines and engineering assemblies	Designs basic processes technology of typical parts machines	[SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools
Subject contents	LECTURE The fabrication process and its components. Data for the technological design, documentation, and technical standard time. Selection machining allowance. Design of semi-finished product. Construction producibility. Machining datum surface and rules for determining the items on the machine tools and precision machining. Technological method of constituting the surface layer of machine component and their influence on the exploitation properties. Processes typical of machine components for various types and degree of machining and assembly automation. Process typication. The group technology. Flexible manufacturing systems. Computer aided manufacturing. Programming numerical machine tool and robots. LABORATORY Determination of work standads time. Effect of machining datum surface and method of setting the cutting lathe to shaft machining errors. Analysis of machining process by the burnishing and grinding. The impact of various process on the positioning accuracy hole axis. Technology of cylindrical gear. Analysis of machine sub-assembly. Fundamentals of programming and and machining on CNC machine tools. PROJECT Projects of typical machine elements" processes: shaft and lever. Implementation of technical documentation, selection allowance, equipment, processing parameters, tools. Determination of time technical standard.		
Prerequisites and co-requisites	Knowledge from the chipless forming, machining and machine tools, and metrology.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Practical exercise	90.0%	20.0%
	Project	60.0%	20.0%
	Written exam	60.0%	60.0%

Example issues/ example questions/ tasks being completed	Process design as a basic element of engineering activities. The production process and its components. Data for the technological design process, documentation and technical time standard. Selection of machining allowances, design of semi-finished products, construction technology. Machining bases and rules for determining objects on machine tools and machining accuracy. Technological methods of constituting the surface layer of machine parts and their influence on operational properties. Technological processes of typical machine parts for various types and degrees of automation of machining and assembly. Process typing, group processing and flexible manufacturing systems. Computer-aided manufacturing, programming of numerical machine tools. Determining the technical standard of working time. Influence of machining bases and the method of setting the lathe on errors in machining the shaft. Technological analysis of the shafts finishing process by burnishing and grinding. Application of an industrial robot in technological processes. Basics of programming and machining on CNC machines (lathe and milling machine). Influence of hole technology on the accuracy of spacing their axes. Process designs of typical machine parts, e.g. shaft, lever, gear wheel. Preparation of documentation, selection of allowances, instrumentation, tools, technological parameters of processing, technical standard of working time.
Work placement	Not applicable
