Subject card

| Subject name and code | Mathematical Analysis, PG_00047542 |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Field of study | Informatics |  |  |  |  |  |  |
| Date of commencement of studies | October 2021 |  | Academic year of realisation of subject |  |  | 2021/2022 |  |
| Education level | first-cycle studies |  | Subject group |  |  | Obligatory subject group in the field of study <br> Subject group related to scientific research in the field of study |  |
| Mode of study | Full-time studies |  | Mode of delivery |  |  | at the university |  |
| Year of study | 1 |  | Language of instruction |  |  | Polish |  |
| Semester of study | 1 |  | ECTS credits |  |  | 6.0 |  |
| Learning profile | general academic profile |  | Assessment form |  |  | exam |  |
| Conducting unit | Mathematics Center -> Vice-Rector for Education |  |  |  |  |  |  |
| Name and surname of lecturer (lecturers) | Subject supervisor |  | dr Magdalena Musielak |  |  |  |  |
|  | Teachers |  | dr Magdalena Musielak mgr inż. Dorota Żarek mgr inż. Wojciech Dąbrowski |  |  |  |  |
| Lesson types and methods of instruction | Lesson type | Lecture | Tutorial | Laboratory | Proje | Seminar | SUM |
|  | Number of study hours | 30.0 | 30.0 | 0.0 | 0.0 | 0.0 | 60 |
|  | E-learning hours included: 0.0 |  |  |  |  |  |  |
|  | Adresy na platformie eNauczanie: <br> WETI (Informatyka) - Matematyka 2021/22 (M.Musielak) - Moodle ID: 15372 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=15372 |  |  |  |  |  |  |
| Learning activity and number of study hours | Learning activity | Participation in didactic classes included in study plan |  | Participation in consultation hours |  | Self-study | SUM |
|  | Number of study hours | 60 |  | 6.0 |  | 84.0 | 150 |
| Subject objectives | Students obtain competence in the range of using methods of mathematical analysis and knowledge how to solve simple problems that can be found in the field of engineering. |  |  |  |  |  |  |

| Learning outcomes | Course outcome | Subject outcome | Method of verification |
| :---: | :---: | :---: | :---: |
|  | [K6_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study and perform tasks, in an innovative way, in not entirely predictable conditions, by:n- appropriate selection of sources and information obtained from them, assessment, critical analysis and synthesis of this information,nselection and application of appropriate methods and toolsn | Student defines basic notions of differential calculus of function with one variable. Student examines functions of one variable, using the concept of a limit, continuity and derivatives. Student uses basic rules and technics of integration to calculate indefinite integrals. Student names some geometric applications of definite integral. Student examines convergence of number series. Student uses power series to approximate calculations. Student determines general and particular solutions of some types of the first and second order differential equations. Uses second order linear differential equations to analysis of linear oscillation. Student uses the packets of software for symbolic and numeric calculations and interprets the results of these calculations. | [SU4] Assessment of ability to use methods and tools |
|  | [K6_W01] Knows and understands, to an advanced extent, mathematics necessary to formulate and solve simple issues related to the field of study | Student defines and uses the basic methods of mathematical analysis and differential equations to formulate and solve simple problems in the field of physics and informatics | [SW1] Assessment of factual knowledge |
| Subject contents | The derivative of one variable function. General rules of differentiation. <br> Higher order derivatives. Taylor's and Maclauren"s formula. L'Hospital's formula. Asymptotes of a graph of a function. <br> Extreme points, upward and downward concavity, inflection points. Information on partial derivatives. Extreme points of two variable function. Indefinite integral. General rules for integration. Integration of elementary functions. <br> The Riemann definite integral. The fundamental theorems of integration. <br> Geometric applications of the definite integral. <br> Number series. Convergent and divergent series. Convergence tests of the number series. <br> Power series. Radius and interval of convergence. <br> Taylor"s and Maclaurin"s series. Integration and differentiation of power series. <br> Examples of applications - approximate calculation of integrals. <br> Information on Fourier series. <br> First order differential equations. General and particular solution. The Cauchy initial value problem. <br> Separable equations and first order linear differential equations. <br> Second order linear differential equations with constant coefficients. Fundamental set of solution of the homogeneous linear differential equation. <br> Non-homogeneous linear differential equations. Method of undetermined coefficients. <br> Examples of applications - harmonic oscillator. |  |  |
| Prerequisites and co-requisites |  |  |  |
| Assessment methods and criteria | Subject passing criteria | Passing threshold | Percentage of the final grade |
|  | Final exam | 40.0\% | 60.0\% |
|  | Midterms | 50.0\% | 40.0\% |

| Example issues/ example questions/ tasks being completed | 1. Find local extremes and intervals of monotonicity of the following function $f(x)=(\ln 2 x) / x$. <br> 2. Find the area between the curve $y=x \ln (x)$ and the $O X$ axis from $x=\sqrt{ }$ e to $x=e$. <br> 3. Find the volume of a solid of revolution obtained by the rotation of the graph of the function $f(x)=1 /(x 2+2 x+5)$ around the OX-axis. Sketch drawing. <br> 4. Check wether the given series with general term an=(2nn!)/nn is convergent. <br> 5. Using the theorems of differentiation or integration of the functional series find the sum of the power series $\Sigma x n /(n+1)$ and next find the sum of the number series $\Sigma 1 /((n+1) 2 n)$. <br> 6. Find the solution of the Cauchy problem : $y^{\prime}-y / x=x \sin (2 x) ; y(\pi / 2)=\pi / 4$. <br> 7. Find the general solution of the equation $y^{\prime \prime}+2 y^{\prime}+y=e-2 x$. |
