

Subject card

Subject name and code	Telecommunication Systems, PG_00047898						
Field of study	Informatics						
Date of commencement of studies	October 2021	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	6	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Teleinformation Networks -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Sylwester Kaczmarek					
	Teachers	dr hab. inż. Sylwester Kaczmarek dr inż. Maciej Sac mgr inż. Jacek Litka dr inż. Mariusz Dzwonkowski					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	45	10.0		45.0	100	
Subject objectives	Getting to know basic technologies applied in telecommunication networks, principles of the organization of the networks and phenomena which are taking place in the realization of services with diversified quality requirements.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W03] Knows and understands, to an advanced extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum	Student describes realization technologies of the telecommunication networks as well as by users available telecommunication services. Student explains architectures, solutions and working principles of functional elements of this networks. Student has also the skill of observation and description of event taking place on the physical, link and network level.			[SW1] Assessment of factual knowledge		
	[K6_U06] can analyse the operation of components, circuits and systems related to the field of study, measure their parameters and examine technical specifications	He is able to analyse situations in the telecommunications network and to make basic measurements in three first layers of the ISO/OSI model.			[SU1] Assessment of task fulfilment		

Subject contents	<p>LECTURE: Global Information Infrastructure (GII) place and role of Telecommunications. GII convergence planes. The essence of telecommunications. Entities of the service delivery process. Telecommunications market goals. Aims of the telecommunications market. Basic definitions. Features, structure and resources of the information exchange system. Basic functions: transmission, switching, multiplexing. Transmission mediums and parameters defining their features. The essence of the problem in signal transmission via the transmission medium. Analogue and digital technology. Processing the information into a telecommunications signal. Problem of the maximization of using transmission mediums. The channel, the link, the transmission system. Telecommunications connection: connectionoriented systems and connectionless systems. Circuits switching, message switching and packets switching. The structure of the telecommunications network and the addressing. Connection control on the node and networks level. The need for signalling. Signalling network. Routing function. The problem of subscriber movement. Mobile subscriber network and addressing. Telecommunications services and theirs classification. Problem of the openness to the telecommunication services. The intelligent network services (IN). A short history of telecommunications. PSTN, IDN, ISDN, GSM, UMTS, LTE - next steps in telecommunications development. STM and ATM technology. The need to evolve IP networks to IP QoS networks. IP QoS network architectures: IntServ, DiffServ, MPLS. Generalized MPLS - GMPLS. Broadband network access. IMS/NGN as an example of the implementation of the NGN concept. Service scenario and its performance parameters. Transmission plane in telecommunications. Changes in the services market and their consequences for telecommunications. SDN - Software Defined Networks. NFV - Network Function Virtualization.</p> <p>LAB: Physical layer for the S/T and U interface of the BRA-ISDN access. Physical layer for the E1 interface of the PCM30/32 system. Structure of the frame and multiframe of PCM30/32 system. DWDM optical transmission systems. The use of GMPLS in optical networks. Call handling scenario in the PSTN/ISDN network. Signalling messages for DSS1. Signalling messages for SS7 with ISUP. Teleservices and supplementary services in networks with circuits switching and with packets switching. Access to broadband services in the ADSL, VDSL and GEPON systems.</p>											
Prerequisites and co-requisites	No requirements											
Assessment methods and criteria	<table border="1" data-bbox="453 871 1490 976"> <thead> <tr> <th data-bbox="453 871 794 902">Subject passing criteria</th> <th data-bbox="794 871 1139 902">Passing threshold</th> <th data-bbox="1139 871 1490 902">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="453 902 794 934">Midterm tests</td> <td data-bbox="794 902 1139 934">50.0%</td> <td data-bbox="1139 902 1490 934">64.0%</td> </tr> <tr> <td data-bbox="453 934 794 976">Practical exercise</td> <td data-bbox="794 934 1139 976">50.0%</td> <td data-bbox="1139 934 1490 976">36.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Midterm tests	50.0%	64.0%	Practical exercise	50.0%	36.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
Midterm tests	50.0%	64.0%										
Practical exercise	50.0%	36.0%										
Recommended reading	Basic literature	Materials prepared by the lecturer available in electronic form in PDF files and in the form of a photocopy (on request).										
	Supplementary literature	No requirements.										
	eResources addresses	Adresy na platformie eNauczenie: Systemy telekomunikacyjne 2024 - Moodle ID: 35923 https://enauczenie.pg.edu.pl/moodle/course/view.php?id=35923										
Example issues/ example questions/ tasks being completed												
Work placement	Not applicable
