Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W05] Knows and understands programming models and evolution of related languages. Knows the methods of analysing and designing information systems and the modeling languages used in them, as well as the basic object-oriented programming platforms.	The lectures give the idea of object oriented programming with the four different programming languages i.e. C++, Java, C# and Python.			[SW1] Assessment of factual knowledge		
	[K6_U01] programs in procedural, object, functional and logic programming languages, codes programs at the processor instruction level, runs and tests programs.	The practical skills are verified by programming using a few object oriented languages			[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools		

Subject contents	1. Software programming paradigms including object oriented approach 2. Encapsulation, inheritance, abstraction and polymorphism in C++ language 3. Specific features of C++ object-orientation 4. Java language and its comparison to C++ language 5. C# language as successor of C++ and Java languages 6. Python as a scripting object oriented language														
Prerequisites and co-requisites	Knowledge on non-object oriented language i.e. C language.
