

Subject card

Subject name and code	Nonrelational databases, PG_00045311						
Field of study	Data Engineering						
Date of commencement of studies	October 2021	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			blended-learning		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Software Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Teresa Zawadzka				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	15.0	0.0	60
	E-learning hours included: 15.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	60	5.0		10.0	75	
Subject objectives	The main goal is to introduce theoretical issues of NoSQL databases. Moreover, four types of NoSQL databases are presented. After this course students should be acknowledged with MongoDB, HBase, Oracle NoSQL and Neo4J.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W07] Knows the methods of information processing, storage, extraction of data stored in various models including: relational, graph and document ones	During the course students become familiar with NoSQL data models: documents, graphs, column-oriented data types and key-value data structures.			[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects		
	[K6_W04] Knows the architecture of computers, operating system processes, file systems, text processing programs, disk and ram memories management rules. Knows the problems of sharing the state, presentation and transformation of information in a distributed system, hypermedia technologies and related services, the architecture of interactive distributed simulation and agent interaction methods.	During the course students learn models of data distribution: sharding and replication, and CAP and BASE theory.			[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects		
	[K6_U03] analyses problems and creates appropriate models, data structures and algorithms (including heuristic and numerical ones), assesses their computational complexity, estimates errors of the received solutions	During the course students learn how to choose the appropriate database for specific business applications.			[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools		

Subject contents	<p>1. Introduction to NoSQL databases</p> <ul style="list-style-type: none"> - types of NoSQL databases - introduction to distributed databases - CAP - BASE <p>2. Document database - MongoDB</p> <p>3. Hadoop, MapReduce and HBase as a column-oriented database</p> <p>4. Key-value databases - Oracle NoSQL</p> <p>5. Graph databases - Neo4J</p>														
Prerequisites and co-requisites	<p>1. Knowledge of relational modeling</p> <p>2. Very good knowledge of SQL language</p> <p>3. Knowledge of OLTP</p>														
Assessment methods and criteria	<table border="1" data-bbox="450 1034 1489 1171"> <thead> <tr> <th data-bbox="450 1034 794 1070">Subject passing criteria</th> <th data-bbox="794 1034 1139 1070">Passing threshold</th> <th data-bbox="1139 1034 1489 1070">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="450 1070 794 1106">exam</td> <td data-bbox="794 1070 1139 1106">50.0%</td> <td data-bbox="1139 1070 1489 1106">30.0%</td> </tr> <tr> <td data-bbox="450 1106 794 1142">tasks during laboratoies</td> <td data-bbox="794 1106 1139 1142">50.0%</td> <td data-bbox="1139 1106 1489 1142">35.0%</td> </tr> <tr> <td data-bbox="450 1142 794 1171">project development</td> <td data-bbox="794 1142 1139 1171">50.0%</td> <td data-bbox="1139 1142 1489 1171">35.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	exam	50.0%	30.0%	tasks during laboratoies	50.0%	35.0%	project development	50.0%	35.0%
Subject passing criteria	Passing threshold	Percentage of the final grade													
exam	50.0%	30.0%													
tasks during laboratoies	50.0%	35.0%													
project development	50.0%	35.0%													
Recommended reading	<p>Basic literature</p> <p>Supplementary literature</p> <p>eResources addresses</p>	<p>1. Professional NoSQL, Shashanki Tiwari, Wiley, 2011.</p> <p>2. MongoDB, The Definitive Guide, Kristina Chodorow, O'Reilly, 2013</p> <p>3. Graph Databases: New Opportunities for Connected Data, Ian Robinson and Jim Webber, O'Reilly 2015.</p> <p>Documentation of NoSQL databases.</p>													
Example issues/ example questions/ tasks being completed	<p>1. Model NoSQL database (of any type)</p> <p>2. Define and execute queries</p>														
Work placement	Not applicable
