

Subject card

Subject name and code	Nonrelational databases, PG_00045311						
Field of study	Data Engineering						
Date of commencement of studies	October 2021	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			blended-learning		
Year of study	3	Language of instruction			Polish		
Semester of study	5	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Software Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Teresa Zawadzka					
	Teachers	dr inż. Grzegorz Gołaszewski dr inż. Teresa Zawadzka					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	15.0	0.0	60
	E-learning hours included: 15.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	60	5.0		10.0	75	
Subject objectives	The main goal is to introduce theoretical issues of NoSQL databases. Moreover, three types of NoSQL databases are presented (document, key-value, graph).						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W07] Knows the methods of information processing, storage, extraction of data stored in various models including: relational, graph and document ones	During the course students become familiar with NoSQL data models: documents, graphs, and key-value data structures.			[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects		
	[K6_U03] analyses problems and creates appropriate models, data structures and algorithms (including heuristic and numerical ones), assesses their computational complexity, estimates errors of the received solutions	During the course students learn how to choose the appropriate database for specific business applications.			[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools		
	[K6_W04] Knows the architecture of computers, operating system processes, file systems, text processing programs, disk and ram memories management rules. Knows the problems of sharing the state, presentation and transformation of information in a distributed system, hypermedia technologies and related services, the architecture of interactive distributed simulation and agent interaction methods.	During the course students learn models of data distribution: sharding and replication, and CAP and BASE theory.			[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects		

Subject contents	<p>1. Introduction to NoSQL databases</p> <ul style="list-style-type: none"> - types of NoSQL databases - introduction to distributed databases - CAP - BASE <p>2. Document database - MongoDB</p> <p>4. Key-value databases - Redis</p> <p>5. Graph databases - Neo4J</p>														
Prerequisites and co-requisites	<p>1. Knowledge of relational modeling</p> <p>2. Very good knowledge of SQL language</p> <p>3. Knowledge of OLTP</p>														
Assessment methods and criteria	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 40%;">Subject passing criteria</th> <th style="width: 30%;">Passing threshold</th> <th style="width: 30%;">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td>tasks during laboratoies</td> <td>50.0%</td> <td>35.0%</td> </tr> <tr> <td>exam</td> <td>50.0%</td> <td>30.0%</td> </tr> <tr> <td>project development</td> <td>50.0%</td> <td>35.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	tasks during laboratoies	50.0%	35.0%	exam	50.0%	30.0%	project development	50.0%	35.0%
Subject passing criteria	Passing threshold	Percentage of the final grade													
tasks during laboratoies	50.0%	35.0%													
exam	50.0%	30.0%													
project development	50.0%	35.0%													
Recommended reading	Basic literature	<p>1. Professional NoSQL, Shashanki Tiwari, Wiley, 2011.</p> <p>2. MongoDB, The Definitive Guide, Kristina Chodorow, O'Reilly, 2013</p> <p>3. Graph Databases: New Opportunities for Connected Data, Ian Robinson and Jim Webber, O'Reilly 2015.</p>													
	Supplementary literature	Documentation of NoSQL databases.													
	eResources addresses	<p>Adresy na platformie eNauczanie:</p> <p>Nonrelational Databases DE 2023_2024 - Moodle ID: 30887 https://enauzanie.pg.edu.pl/moodle/course/view.php?id=30887</p>													
Example issues/ example questions/ tasks being completed	<p>1. Model NoSQL database (of any type)</p> <p>2. Define and execute queries</p>														
Work placement	Not applicable
