

## Subject card

Subject name and code	Optoelectronics, PG_00047535						
Field of study	Electronics and Telecommunications						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2022/2023		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	4		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Metrology and Optoelectronics -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Marcin Strąkowski				
	Teachers		dr inż. Adam Mazikowski  dr hab. inż. Paweł Wierzbza  dr hab. inż. Robert Bogdanowicz  dr inż. Marcin Strąkowski  prof. dr hab. inż. Małgorzata Szczerska				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		3.0		27.0	75
Subject objectives	The goal of the course of the Optoelectronics is to enable students of the EiT study of the phenomena and laws of optics, selected optoelectronic components, basic applications of modern measurements methods as well as technological processes and the systems for acquisition and processing of information.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U06] can analyse the operation of components, circuits and systems related to the field of study, measure their parameters and examine technical specifications		The student evaluates the optoelectronic components characteristics and can analyse the coincidences between themselves.		[SU1] Assessment of task fulfilment		
	[K6_W03] Knows and understands, to an advanced extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum		The student understands and describes basic optical and optoelectronic phenomena. He also understands and analyses the principles of operation and features of optoelectronic components. He can chose correctly the components for optoelectronic system.		[SW1] Assessment of factual knowledge		

Subject contents	1. Lecture program, Bibliography, Management of Lecture 2. Optoelectronic System, Devices, Modules 3. Description Methods of Optical Radiation Radiometry and Photometry 4. Radiometric and Photometric Quantities and Units 5. Propagation of Radiation in Optoelectronic Systems 6. Light Interaction with Matter: Absorption, Transmission, Reflection 7. Radiation Scattering 8. Phenomena on the Boundary Between Optical Media, Fresnel's Equations 9. Interference 10. Interferometers, Filters 11. Fabry-Pérot Resonator 12. Applications of Interferometry 13. Light Sources: Thermal, Electroluminescent, VF 14. Light Sources LED 15. Principles of the Laser, Laser Oscillation Conditions 16. Properties of the Laser Beam, Types of Lasers, Applications 17. Laser Diode, Basic LD Characteristics, Parameters, Applications 18. Photodetectors, Thermal Detectors, Photon Detectors (PMT, PIN, APD, CCD, CMOS), Properties, Characteristics, Applications 19. Safety in Optical Setups, Laser Safety 20. Visualization of Information 21. Optical Fibers and their Classification 22. Basic Parameters of Optical Fibers: Numerical Aperture, Acceptance Angle, Attenuation 23. Step-index optical fiber 24. Dispersion in Optical Fibers. Impact on Transmission Properties 25. Gradient-Index Optical Fiber 26. Optical Transmission 27. Single-Mode Optical Fiber and its Basic Properties 28. Optical Time Domain Reflectometry (OTDR) and its Application for Optical Fiber Measurements 29. Passive Optical Components 30. Optoelectronic System Design 31. Optical Sensing 32. Recent Trends in Optoelectronics		
Prerequisites and co-requisites	No requirements		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Midterm colloquium	50.0%	60.0%
	Execution of the all laboratory exercises	50.0%	40.0%
Recommended reading	Basic literature	1. J. Siuzdak: Wstęp do współczesnej telekomunikacji światłowodowej 2. 1999 B. Ziętek: Optoelektronika, 2004 3. G. Einarsson: Podstawy telekomunikacji światłowodowej, 4. 1998 BEA Saleh, MC Teich: Fundamentals of Photonics, 5. 2007 S. Kasap: Optoelectronics and Photonics, 2001	
	Supplementary literature	No requirements	
	eResources addresses	Adresy na platformie eNauczanie: Optoelektronika PG_00047535, EiT, I st. sem.04 (2022/23,) - Moodle ID: 26852 <a href="https://enauczanie.pg.edu.pl/moodle/course/view.php?id=26852">https://enauczanie.pg.edu.pl/moodle/course/view.php?id=26852</a>	
Example issues/ example questions/ tasks being completed	The optical beam principles and methods of its description. The interference, its descriptions and applications The basic setup, features and applications of the lasers. Optical detectors: principles of operation, classification and features.		
Work placement	Not applicable
