GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Materials Science and Equipment Design, PG_00047588		
Field of study	Electronics and Telecommunications		
Date of commencement of studies	October 2021	Academic year of realisation of subject	2021/2022
Education level	first-cycle studies	Subject group	Obligatory subject group in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	2	ECTS credits	2.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Department of Metrology and Optoelectronics -> Faculty of Electronics, Telecommunications and Informatics		
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Marcin Gnyba	
	Teachers	dr hab. inż. Marcin Gnyba dr inż. Marcin Strąkowski dr hab. inż. Paweł Wierzba dr hab. inż. Robert Bogdanowicz	

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
	Adresy na platformie eNauczanie:						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	30	2.0	18.0	50

Subject objectives	Subject necessary for proper formation of the graduate profile. The student acquires knowledge of the construction materials used in electronics and construction of basic electronic components. Together he acquires skills of the selection of materials and components as well as measuring their parameters.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K6_W03] Knows and understands, to an advanced extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum	1. Student classifies dielectrics, magnetics, conductors and resistive materials. 2. Student describes construction and properties of RLC components. 3. The student describes the influence of the temperature and frequency of the signal on electronic materials and RLC elements.	[SW1] Assessment of factual knowledge
[K6_W02] Knows and understands, to an advanced extent, selected laws of physics and physical phenomena as well as methods and theories explaining the complex relationships between them, constituting the basic general knowledge in the field of technical sciences related to the field of study	1. Student describes selected interactions between EM radiation and materials. 2. Student describes properties and parameters of dielectrics, magnetics, conductors and resistive materials.	[SW1] Assessment of factual knowledge
[K6_U05] can plan and conduct experiments related to the field of study, including computer simulations and measurements; interpret obtained results and draw conclusions	1. The student is able to perform a measurement task on the basis of workplace training. 2. The student is able to use the signal generator, multimeter, RLC meter, oscilloscope and thermostat in a basic degree 3. Student analyses correlation between molecular composition of materials and their macroscopic properties.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools

Subject contents

1. Macroscopic and microscopic approach to solid state materials; crystalline and amorphous materials. 2. Thin films and bulk materials. Alloys, ceramics, polymers and composite materials. 3. Electromagnetic spectrum and conventional designations. Magnetization of matter; electrical conductivity; matter polarization. 4. Magnetic material classifications: ferromagnetism, ferrimagnetism, paramagnetism. Soft and hard magnetic materials. 5. Magnetic alloys and magnetic ceramics (ferrites) - selected mattters of manufacturing technology 6. Magnetic components and their equivalent circuits. 7. Examples of magnetic materials and their applications: magnetic recording materials, cores of the coils and transformers, sensors, high energy magnets; trends of development. 8. Dielectric materials and insulation; electronic polarization; dielectric loss. 9. Linear and nonlinear dielectrics: ferroelectricity, piezoelectricity and pyroelectricity. 11. Dielectric materials examples and aplications.

Prerequisites and co-requisites

No requirements

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Practical exercise	50.0%	40.0%
Midterm colloquium	50.0%	60.0%

Supplementary literature	No requirements
eResources addresses	

Example issues/ example questions/ tasks being completed

1 Measurement of nominal and residual parameters of the electronic components.

2 Determination of temperature parameters of materials and components.

3 Determine the relationship between the composition of the material and its electrical and magnetic parameters.
