

## GDAŃSK UNIVERSITY

## Subject card

| Subject name and code                          | Optoelectronic Components and Circuits, PG_00048095  |   |   |  |          |   |             |                 |  |
|--|--|---|---|--|----------|---|-------------|-----------------|--|
| Field of study                                 | Electronics and Telecommunications   |   |   |  |          |   |             |                 |  |
| Date of commencement of studies                | October 2021   |   | Academic year of<br>realisation of subject  |  |          | 2024/2025   |             |                 |  |
| Education level                                | first-cycle studies  |   | Subject group   |  |          | Optional subject group<br>Subject group related to scientific<br>research in the field of study   |             |                 |  |
| Mode of study                                  | Full-time studies  |   | Mode of delivery  |  |          | at the university   |             |                 |  |
| Year of study                                  | 4  |   | Language of instruction   |  |          | Polish  |             |                 |  |
| Semester of study                              | 7  |   | ECTS credits  |  |          | 2.0   |             |                 |  |
| Learning profile                               | general academic profile   |   | Assessment form   |  |          | assessment  |             |                 |  |
| Conducting unit                                | Department of Metrol   | ogy and Optoe                             | lectronics -> Fa  | aculty of Electro                      | onics, T | elecom  | munications | and Informatics |  |
| Name and surname                               | Subject supervisor   |   | dr hab. inż. Paweł Wierzba  |  |          |   |             |                 |  |
| of lecturer (lecturers)                        | Teachers   |   | dr hab. inż. P  | hab. inż. Paweł Wierzba                |          |   |             |                 |  |
| Lesson types and methods of instruction        | Lesson type  | Lecture                                   | Tutorial  | Laboratory                             | Projec   | t   | Seminar     | SUM             |  |
|  | Number of study<br>hours   | 15.0                                      | 0.0   | 0.0                                    | 15.0     |   | 0.0         | 30              |  |
|  | E-learning hours included: 0.0   |   |   |  |          |   |             |                 |  |
| Learning activity<br>and number of study hours | Learning activity  | Participation i<br>classes incluc<br>plan |   | Participation in<br>consultation hours |          | Self-study  |             | SUM             |  |
|  | Number of study hours  | 30  |   | 2.0                                    |          | 18.0  |             | 50              |  |
| Subject objectives                             | Provision of knowledge about the principles of operation and key characteristics of selected optoelectronic components and skills needed for correct use of these components and for design of circuits emplying these components. |   |   |  |          |   |             |                 |  |
| Learning outcomes                              | Course outcome   |   | Subject outcome   |  |          | Method of verification  |             |                 |  |
|  | [K6_W32] Knows the parameters,<br>functions and methods of analysis,<br>design and optimization of<br>analogue and digital circuits and<br>electronic systems  |   |   |  |          | [SW1] Assessment of factual knowledge   |             |                 |  |
|  | [K6_U06] can analyse the<br>operation of components, circuits<br>and systems related to the field of<br>study, measure their parameters<br>and examine technical<br>specifications   |   | can perform the analysis of<br>operation of semiconductor<br>sources and detectors of optical<br>radiation, encoders and<br>optocouplers, as well as the<br>circuits working with them. |  |          | [SU3] Assessment of ability to<br>use knowledge gained from the<br>subject<br>[SU5] Assessment of ability to<br>present the results of task |             |                 |  |

| Subject contents   | <ol> <li>Photon and thermal detectors. Spectral characteristics and transduction mechanisms</li> <li>PIN and PN photodiodes design, principles of operation, important electrical and spectral characteristics</li> <li>Detection setups using photodiodes</li> <li>Phototransistors and photoresistors</li> <li>Light Emitting Diodes principles of operation, materials</li> <li>Selected designs of LEDs. Coupling to optical fibres</li> <li>Driving circuits for LEDs. Intensity modulation</li> <li>Optocouplers and optoisolators principles of operation, main types</li> <li>Characteristics and applications of optocouplers</li> <li>Light propagation mechanisms in laser diodes</li> <li>Overview of laser diode designs. Fabry-Perot laser diodes structure and characteristics</li> <li>DFB and DBR Laser diodes structures, characteristics</li> <li>Semote control systems information coding, implementations</li> <li>Remote control systems information coding, implementations</li> <li>Remote control systems information coding. Information encoding</li> <li>Design of circuits interfacing to detectors</li> <li>Design of circuits using optocouplers</li> <li>Design of circuits using optocouplers</li> </ol> |  |                               |  |  |  |
|--|--|--|-------------------------------|--|--|--|
| Prerequisites<br>and co-requisites                             | Command of English at a level sufficient to use technical docummentation   |  |                               |  |  |  |
| Assessment methods<br>and criteria                             | Subject passing criteria   | Passing threshold  | Percentage of the final grade |  |  |  |
|  | Midterm colloquium   | 51.0%  | 50.0%                         |  |  |  |
|  | Project  | 50.0%  | 50.0%                         |  |  |  |
