

Subject card

Subject name and code	Remote Detection and Location of Objects, PG_00049433						
Field of study	Electronics and Telecommunications						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2024/2025		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	4		Language of instruction		Polish		
Semester of study	7		ECTS credits		1.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Marine Electronic Systems -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Jacek Marszał				
	Teachers		dr hab. inż. Jacek Marszał				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	0.0	0.0	15.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		1.0		9.0	25
Subject objectives	The aim of the course is to familiarize students with the foundations of navigation theory as well as construction and use of maritime navigation devices.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_K02] is ready to critically assess possessed knowledge and acknowledge the importance of knowledge in solving cognitive and practical problems		Students iare ready to critically assess their knowledge in the field of remote object detection.		[SK5] Assessment of ability to solve problems that arise in practice		
	[K6_U09] can carry out a critical analysis of the functioning of existing technical solutions and assess these solutions, as well as apply experience related to the maintenance of technical systems, devices and facilities typical for the field of studies, gained in the professional engineering environment		The student is able to make a critical analysis of the functioning of existing technical solutions of remote detection systems.		[SU5] Assessment of ability to present the results of task		
Subject contents	1. Organizational matters: credit rules, preparation of speeches, consultations, literature 2. Discussion of the seminar topics: - Systems for remote detection and location of meteorological objects, - Systems for remote detection and location of flying objects, - Systems for remote detection and location of circular objects, - Systems for remote detection and location of floating and underwater objects 3. Development of seminar topics 4. Presentations, discussions 5. Summary						
Prerequisites and co-requisites							
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Evaluation of the presentation		60.0%		100.0%		

Recommended reading	Basic literature	<ol style="list-style-type: none"> 1. Z. Czekala, Parada radarów, <i>Dom Wydawniczy Belona</i>, Warszawa 1999. 2. R.
