

Subject card

Subject name and code	Calculus, PG_00047794						
Field of study	Informatics						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2021/2022		
Education level	first-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Part-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	1		ECTS credits		8.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Mathematics Center -> Vice-Rector for Education						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Magdalena Musielak				
	Teachers		dr Magdalena Musielak				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	30.0	0.0	0.0	0.0	60
	E-learning hours included: 0.0						
	Adresy na platformie eNauczanie:						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		15.0		125.0	200
Subject objectives	Students obtain competence in the range of using methods of mathematical analysis and knowledge how to solve simple problems that can be found in the field of engineering.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W01] Knows and understands, to an advanced extent, mathematics necessary to formulate and solve simple issues related to the field of study		Student mentions basic properties of elementary functions; Student solves equations and inequalities with elementary functions. Student gives the definition of basic notions of differential calculus. Student uses basic notions and formulas of differential calculus. Student determines intervals of monotonicity of a given functions and its extrema. Students calculates antiderivatives using the substitution method of integration and integration by parts. Student applies definite integrals to solving geometrical problems.		[SW1] Assessment of factual knowledge		
	[K6_U01] can apply mathematical knowledge to formulate and solve complex and non-typical problems related to the field of study and perform tasks, in an innovative way, in not entirely predictable conditions, by:n- appropriate selection of sources and information obtained from them, assessment, critical analysis and synthesis of this information,n-selection and application of appropriate methods and toolsn		Student is able to process the acquired information, analyze and interpret it, draw conclusions and reason opinions. Student understands the need of lifelong learning and improving their engineering knowledge.		[SU4] Assessment of ability to use methods and tools		

Subject contents	The set of Real numbers and its subsets. The absolute value of a Real number. Bounded sets and their upper and lower bounds. The continuity axiom of real numbers' set. Number sequences. The limit of a sequence. Properties of convergent sequences. Functions and their properties. Domain and co-domain, the graph of a function. Injection, surjection and bijection. Function superposition. The inverse function. The limit of a function. Continuous functions and their properties. The derivative of one variable function. General rules of differentiation. Higher order derivatives. Taylor"s and Maclauren"s formula. LsHospitalss formula. Asymptotes of a graph of a function. Extreme points, upward and downward concavity, inflection points. Information on partial derivatives. Extreme points of two variable function. Indefinite integral. General rules for integration. Integration of elementary functions. The Riemann definite integral. The fundamental theorems of integration. Geometric applications of the definite integral.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Midterms	50.0%	100.0%

	eResources addresses		
Example issues/ example questions/ tasks being completed	1. Evaluate the limit $\lim_{n \rightarrow \infty} [(2n+31)/(2n-1))^{2n}+(\sin 2n)/n]$. 2. Find all asymptotes of the function $f(x) = (3x^3+1) / (x^2-2x+1)$. 3. For the given function $f(x)=4x \arcsin(1-2x)$ find the domain and evaluate $f'(1/4)$. 4. Find intervals of monotonicity and local extremes of the following function $f(x)=xe^{1/x}$. 5. Evaluate integrals: a) $\int (2x+1)e^{-3x}dx$, b) $\int_0^3 (\sqrt{x})/(3+x) dx$. 6. Find the area between two curves $y=2x$, $y=3-x^2$.		
Work placement	Not applicable
