

## Subject card

Subject name and code	Fundamentals of Machine Learning, PG_00053348						
Field of study	Biomedical Engineering, Biomedical Engineering, Biomedical Engineering						
Date of commencement of studies	February 2022	Academic year of realisation of subject				2022/2023	
Education level	second-cycle studies	Subject group				Optional subject group Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	2	Language of instruction				Polish	
Semester of study	3	ECTS credits				2.0	
Learning profile	general academic profile	Assessment form				exam	
Conducting unit	Department of Biomedical Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Jacek Rumiński				
	Teachers		mgr inż. Natalia Kowalczyk prof. dr hab. inż. Jacek Rumiński				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		2.0		10.0	57
Subject objectives	The aim of the course is to familiarize students with the basics of machine learning, in particular with data classification algorithms, linear and logistic regression, and the practical use of artificial neural networks.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_W01] Knows and understands, to an increased extent, mathematics to the extent necessary to formulate and solve complex issues related to the field of study.		The student knows and understands the mathematical foundations related to selected machine learning algorithms.		[SW1] Assessment of factual knowledge		
	[K7_W03] Knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum.		The student knows and understands the principles of operation of selected machine learning algorithms. The student knows and understands the principles of model training with the use of a data set, and knows and understands the methods of assessing the quality of the model using properly selected measures.		[SW1] Assessment of factual knowledge		
	K7_U04		The student is able to use programming libraries and software to solve the problem of machine learning. The student is able to train the model using a set of data and assess the quality of the model using properly selected measures.		[SU1] Assessment of task fulfilment		
Subject contents	Introduction - scope of the subject and literature. Definitions of artificial intelligence and machine learning. Types of machine learning. Preprocessing - data cleansing. Data transformation. Feature selection and decision trees. Random forests and ensembles of classifiers. Support vector machine. Unsupervised classification. Genetic algorithms. Basics and characteristics of genetic algorithms. Selection methods, crossing, mutation. Rule-based systems. Fuzzy logic. Fuzzy reasoning: Mamdani and Sugeno's inference. Rough sets. Linear and logistic regression. Artificial neural networks - gradient method. Artificial neural networks - model training and testing. Artificial neural networks - autcoders. Introduction to deep networks and convolutional neural networks. Practical use of convolutional networks in image classification.						
Prerequisites and co-requisites	Basics of computer programming and linear algebra.						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	laboratory exercises	51.0%	50.0%
	exam	51.0%	50.0%
Recommended reading	Basic literature	Sebastian Raschka, Vahid Mirjalili, Python Machine Learning, Packt, 2021	
		François Chollet, Deep Learning with Python, Second Edition, Manning, 2021	
	Supplementary literature	Aurélien Géron, Hands-On Machine Learning with Scikit-Learn and TensorFlow: Concepts, Tools, and Techniques to Build Intelligent Systems, O'Reilly, 2019	
	eResources addresses		
Example issues/ example questions/ tasks being completed			
Work placement	Not applicable
