

Subject card

Subject name and code	Human machine interaction methods, PG_00053331						
Field of study	Biomedical Engineering, Biomedical Engineering, Biomedical Engineering						
Date of commencement of studies	February 2022	Academic year of realisation of subject				2021/2022	
Education level	second-cycle studies	Subject group				Optional subject group Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	1	Language of instruction				Polish	
Semester of study	1	ECTS credits				4.0	
Learning profile	general academic profile	Assessment form				exam	
Conducting unit	Department of Biomedical Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Tomasz Kocejko				
	Teachers		dr inż. Tomasz Kocejko				
Lesson type and method of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	45	5.0	50.0	100		
Subject objectives	To introduce students to the principles of Human-Machine interaction and interface design. To introduce students to basic techniques used for human-computer and human-machine interaction. To introduce the trend of changes in technology connected with new interfaces as well as with the use of artificial intelligence in human-machine and human-computer interfaces. To teach students design assumptions and rapid prototyping techniques for effective human-computer interfaces						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K7_W05] Knows and understands, to an increased extent, methods of process and function support, specific to the field of study.				[SW1] Assessment of factual knowledge		
	[K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment				[SU4] Assessment of ability to use methods and tools		
	[K7_U09] can carry out a critical analysis of the functioning of existing technical solutions and assess these solutions, as well as apply experience related to the maintenance of advanced technical systems, devices and facilities typical for the field of studies, gained in the professional engineering environment				[SU4] Assessment of ability to use methods and tools		
	K7_K02				[SK2] Assessment of progress of work		

Subject contents	Interface prototyping methods Interface evaluation methods The role of AI in human-machine interaction Methods of data acquisition and processing for human-machine and human-computer interaction Use of gestures in human-computer interaction Posture estimation methods for human-computer, human-machine interaction Face and emotion detection Hybrid interfaces		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
		60.0%	50.0%
		60.0%	50.0%
