

Subject card

Subject name and code	Reception of Radio Signals I, PG_00047459						
Field of study	Electronics and Telecommunications						
Date of commencement of studies	February 2022	Academic year of realisation of subject			2021/2022		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Radiocommunication Systems and Networks -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Jacek Stefański				
	Teachers		prof. dr hab. inż. Jacek Stefański				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	15.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
	Number of study hours	30	4.0		16.0	50	
Subject objectives	Acquaint students in detail with construction and operation of a modern radio communications receiver						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_K02] is ready to provide critical evaluation of received content and to acknowledge the importance of knowledge in solving cognitive and practical problems		The student knows and can use specialized vocabulary in the field of modern radio communication.		[SK4] Assessment of communication skills, including language correctness		
	[K7_U06] can analyse the operation of components, circuits and systems related to the field of study; measure their parameters; examine technical specifications; interpret obtained results and draw conclusions		The student can formulate the radio link budget and explain the influence of the receiver parameters on this budget. The student solves simple tasks on the receiver's noise ratio, can explain the causes and effects of intermodulation distortion in the receiver		[SU4] Assessment of ability to use methods and tools		
	[K7_W03] Knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum.		The student knows the basic elements of the theory of radio reception with particular emphasis on digital systems and knows the reception techniques used in modern cellular systems.		[SW1] Assessment of factual knowledge		
Subject contents	1. Radio link budget 2. Criteria of speech and data signals reception: distortions, signal to noise ratio, bit error rate 3. Basic parameters of receiver: sensitivity, selectivity, stability and inter-modulation resistance 4. Noise of receiver 5. Noise figure and noise temperature 6. Analog receiver scheme in FDMA system 7. Digital receiver scheme in TDMA and CDMA system 8. Optimal reception of digital signals in Gaussian channel 9. Intersymbol interference cancellation 10. Fading signal reception 11. Receiver for SDMA system 12. Adaptive receiver 13. Viterbi algorithm for MLSE detector 14. Frequency, time, bit and block synchronization in digital receiver 15. Multiuser detection (decorrelation detector, MMSE detector)						
Prerequisites and co-requisites	No requirements						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written examination	50.0%	70.0%
	Midterm colloquium	50.0%	30.0%
Recommended reading	Basic literature	Tomasi W., Advanced Electronic Communications Systems, Prentice Hall, 1992. Mitola J., Software Radio Architecture, John Wiley & Sons, 2000. Schaub K. B., Kelly J., Production Testing of RF and System-on-a-Chip Device for Wireless Communications, Artech House, 2004. Proakis J. G., Digital Communications, McGraw-Hill, 1989.	
	Supplementary literature	No requirements	
	eResources addresses		
Example issues/ example questions/ tasks being completed			
Work placement	Not applicable
