

Subject card

Subject name and code	Modern Radio Communication Systems, PG_00047466						
Field of study	Electronics and Telecommunications						
Date of commencement of studies	February 2022	Academic year of realisation of subject			2021/2022		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			English		
Semester of study	1	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Radiocommunication Systems and Networks -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Sławomir Gajewski					
	Teachers	dr inż. Sławomir Gajewski dr inż. Małgorzata Gajewska					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		6.0		24.0	75
Subject objectives	The aim of this subject is to familiarize the student with the detailed characteristics of modern radio communication systems as well as trunking and wireless systems.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_W05] Knows and understands, to an increased extent, methods of process and function support, specific to the field of study.	The student knows and understands the methods of supporting system design, and their operation, and selection of capacitive parameters of the radio communication link. Student is able to calculate and analyze capacity and coverage characteristics of systems.	[SW1] Assessment of factual knowledge
	[K7_U03] can design, according to required specifications, and make a complex device, facility, system or carry out a process, specific to the field of study, using suitable methods, techniques, tools and materials, following engineering standards and norms, applying technologies specific to the field of study and experience gained in the professional engineering environment	The student knows the basic characteristics and operating principles of selected radiocommunication systems. The student is able to analyze and design selected elements of radio interfaces of modern radio communication systems	[SU1] Assessment of task fulfilment
	[K7_W03] Knows and understands, to an increased extent, the construction and operating principles of components and systems related to the field of study, including theories, methods and complex relationships between them and selected specific issues - appropriate for the curriculum.	The student knows the principles of the systems and mechanisms of signal processing in radio interfaces. He knows the principles of radio interfaces.design.	[SW1] Assessment of factual knowledge
	[K7_W06] Knows and understands, to an increased extent, the basic processes taking place in the life cycle of devices, facilities and technical systems.	The student understands the architecture and operating principles of components of telecommunications nodes in modern radio communication systems.	[SW1] Assessment of factual knowledge
	[K7_U06] can analyse the operation of components, circuits and systems related to the field of study; measure their parameters; examine technical specifications; interpret obtained results and draw conclusions	The student knows the methods of multiple access and physical resource allocation. He is able to analyze the architecture of modern radio communication systems.	[SU2] Assessment of ability to analyse information

Subject contents	<p>Modern signal processing techniques CDMA.</p> <p>Modern signal processing techniques OFDMA.</p> <p>Basic properties of GSM, UMTS and LTE.</p> <p>Operating environments of cellular systems, FDD and TDD modes.</p> <p>The GSM cellular system architecture and technical description.</p> <p>GSM subsystems: GPRS, HSCSD.</p> <p>The EDGE subsystem.</p> <p>Basic properties of orthogonal and pseudonoise sequences.</p> <p>Quality of direct spread spectrum systems. Processing gain, bit error probability.</p> <p>Immunity of the DS CDMA system on interference.</p> <p>Evaluation of the capacity of cellular network with direct spread spectrum for voice services.</p> <p>Factors affecting the capacity of the DS CDMA system. The trade-off of capacity, coverage and quality.</p> <p>Integrated architecture of UMTS and GSM. Core and radio access network.</p> <p>Communication interfaces. Bearer services and teleservices.</p> <p>Organisation of protocols and transmission channels in UMTS. Physical, logical and transport channels.</p> <p>Procedure of random access to a channel in UMTS.</p> <p>Data processing in transport channels both in uplink and downlink. Frame structure and packet forming. Forming of physical channel.</p> <p>Orthogonalization and complex spectrum spreading in the WCDMA interface both in uplink and downlink.</p> <p>The QPSK modulation in the WCDMA/FDD radio interface. Hybrid phase shift of uplink scrambling sequences. Analysis of signal constellation properties.</p> <p>Demodulation of signals both in uplink and downlink in the WCDMA/FDD interface. Analysis of complex descrambling and deorthogonalization.</p> <p>The HSPA subsystem.</p> <p>Basic characteristics of LTE system architecture and basic parameters.</p> <p>The LTE radio interface. The OFDM multi-tone modulation. Signal processing and properties of OFDMA and SC-FDMA.</p> <p>Organisation of protocols and transmission channels in the LTE system. Physical, logical and transport channels.</p>
------------------	---

	<p>Modern dispatch-trunking systems. The TETRA system, DMR, GoTa.</p> <p>The LTE trunking systems.</p> <p>The Bluetooth wireless system.</p> <p>The ZigBee wireless system.</p> <p>The WiFi systems.</p> <p>WIMAX and WIMAX mobile systems.</p>									
Prerequisites and co-requisites
